

## Identification and prioritization of areas for stormwater management review

Dear Mayor and council members,

I am writing to ask about how to provide input on identification and prioritization of areas for stormwater management review.

As many of you know I was mistakenly told that the Circle was part of the scope of the current stormwater management RFP. Because the stormwater management issues are worsening in the circle, I followed up on the timeline of the RFP. I was then told that the Circle and second avenue were NOT part of the scope of stormwater management RFP.

No problem, we can all make mistakes, but when I asked about adding the Circle and second avenue to the scope of the RFP, I was told in no uncertain terms that this could NOT happen even though the RFP hadn't even gone out.

Imagine my surprise during last week's town hall meeting, when it was presented as a simple thing to provide input and change the road work RFP. In fact the March Bulletin says suggestions from residents where road work should be considered are welcomed, despite this RFP already going out last year.

Is there a reason the process and procedures are different depending on the focus of the RFP? Should we not also have a call for people to identify and prioritize areas for stormwater management review?

Thank you for your consideration.  
Liz
