

MASTER PLAN 2019

WORKING DRAFT

TOWN OF WASHINGTON GROVE MASTER PLAN

Introduction; Purposes of the Plan

Exhibit A – Current Zoning and Growth Areas

Exhibit B – Town Buildings, Parks, Community Facilities

1. Land Use and Zoning
 - 1.1 Residential Zones
 - 1.2 Commercial Zone
 - 1.3 Forests, Parks, and Other Town-Owned Land
 - 1.4 Creation of Industrial and/or Service Zones
Upon Future Annexation
2. Municipal Growth and Boundary Enhancements
 - 2.1 Growth Within Town
 - 2.2 Municipal Growth Areas
 - 2.3 Boundary Enhancements
3. Transportation
 - 3.1 Walkways
 - 3.2 Streetlights, Walkway Lights, and Utilities
 - 3.3 Parking Policy
 - 3.4 Walkway/Bikeway Connection
 - 3.5 Railroad Corridor
 - 3.6 Washington Grove Lane
 - 3.7 Humpback Bridge/Railroad Street
 - 3.8 Ridge Road
 - 3.9 McCauley Street and Maple Road
 - 3.10 Center Street
 - 3.11 Cherry Avenue
 - 3.12 Brown Street
 - 3.13 I-370 / InterCounty Connector (ICC)
4. Community Facilities
 - 4.1 McCathran Hall
 - 4.2 Town Maintenance Shop
 - 4.3 Gazebo
 - 4.4 Recreation Shed
 - 4.5 Walkway Lighting
 - 4.6 Incidental Structures
5. Recreation and Parks

- 5.1 Designated Parks and Green Space
- 5.2 Maple Lake
- 6. Environmental Concerns
 - 6.1 Forest Conservation
 - 6.2 Sensitive Areas
- 7. Water Resources Element
 - 7.1 Water Supply System
 - 7.2 Wastewater System
 - 7.3 Stormwater Management and Pollution Reduction
- 8. Commercial Corner
 - 8.1 Long-term Vision for Commercial Corner
 - 8.2 Zoning Issues
 - 8.3 Beautification and Safety Issues
- 9. Development and Preservation Strategies
 - 9.1 Infill Development and Re-development
 - 9.2 Historic Character
 - 9.3 Overall Layout and Walkways
 - 9.4 Structures and Special Venues
 - 9.5 Scale and Character of Homes
 - 9.6 Neighborhoods
 - 9.7 Financial Incentives
 - 9.8 Connections with Neighbors and Viewsheds
- 10. Interjurisdictional Issues

INTRODUCTION; PURPOSES OF THE PLAN

Washington Grove is an incomparable town -- unique in its roots, in its initial land use plan, in the design of its dwellings, in its determination to retain more land in a natural state as forests and parks than developed property, and in the character of its history.

Recognizing that most of the Town's privately-owned parcels are already developed, the goals and objectives of this plan are:

- Preserve the integrity of the Town and its way of life by providing guidance for protection of the original pattern and character of the community
- Enhance the Town's ~~destiny-future~~ by preserving historic resources through thoughtful adaptation of housing stock and conservation of the natural landscape
- Protect and improve the economic value of both the privately-owned property and the property and resources held in common
- Create an awareness of Washington Grove in adjacent jurisdictions and support planning requirements throughout the State

Integral to the value of the commons is the "sense of place" described in the nomination form for inclusion on the National Register for Historic Places. That character is a unique composite of setting, historic legacy, and community life that is strong yet vulnerable to gradual erosion on many fronts. The threats are both from without, in the form of ever encroaching urbanization, and internal in the form of diminished communal contribution and physical integrity. The Town is currently engaged in an effort to update the nomination to better define the landscape elements and more recent historic periods as a means of strengthening the document as a basis and guide to preserving its historic integrity. The Development and Preservation Strategies element of the Plan – Section 9 – contains descriptions of the character-defining features identified in the nomination, the roles they play in the Town's heritage and recommendations for their preservation

The most striking element of the layout of the Town is the relative proportion of developed and natural spaces. Even the developed areas are integrated into the natural environment to achieve "a Town within a Forest."

The preparation of a master plan is the legal responsibility of the Washington Grove Planning Commission under the Annotated Code of Maryland, ~~Article 66B~~ Land Use Article. It states that "a planning commission shall make and approve a plan which the commission shall recommend to the local legislative body for adoption" and that the plan shall "serve as a guide to public and private actions and decisions to insure the development of public and private property in appropriate relationships." The plan must include the following elements:

1. Statement of goals, objectives, principles, policies, and standards
2. Land use plan element including urban growth areas
3. Transportation plan element
4. Community facilities plan element
5. Mineral resources plan element (if appropriate)

6. Water resources plan element reviewed by the Maryland Department of the Environment
7. Identification of areas of critical State concern (if appropriate)
8. Sensitive area element/environmental quality reviewed by the Maryland Departments of Natural Resources and Environment
9. Recommendations of the planning commission for land development regulations to implement the plan and which encourage the following:
 - (a) Streamlined review of applications for development, including permit review and subdivision review within the areas designated for growth in the plan;
 - (b) The use of flexible development regulations to promote innovative and cost-saving site design and protect the environment; and
 - (c) Economic development in areas designated for growth in the plan through the use of innovative techniques.
10. Municipal growth element

In addition to those mandatory items, the Town of Washington Grove Master Plan includes the following specific subject areas:

- Recreation and Parks
- Commercial Corner
- Development and Preservation Strategies
- Interjurisdictional Issues

The State's ~~Article 66B-Land Use Article~~ also mandates that a community's master plan implement the following visions:

1. Development is concentrated in suitable areas;
2. Sensitive areas are protected;
3. In rural areas, growth is directed to existing population centers and resource areas are protected;
4. Stewardship of the Chesapeake Bay and the land is a universal ethic;
5. Conservation of resources, including a reduction in resource consumption, is practiced;
6. To assure the achievement of 1 through 5 above, economic growth is encouraged and regulatory mechanisms are streamlined;
7. Adequate public facilities and infrastructure under the control of the municipal corporation are available or planned in areas where growth is to occur, and
8. Funding mechanisms are addressed to achieve these visions.

This master plan is a guide to public and private actions and decisions adopted by the Town. The plan formulation process involved work sessions of the Planning Commission, focus group meetings, and public hearings before the Commission, the Mayor and Town Council. The plan addresses areas outside of Town as these relate to the preservation and enhancement of the boundaries and gateways of the Town. Notification and participation by Town residents and by other jurisdictions and interests have been encouraged to insure the common good as development of public and private properties occurs.

We who live in Washington Grove enjoy the fruits of those who planned for us. It is our intention and our legal responsibility to do the same for future residents.

~~Strikethrough~~ : Indicates matter deleted from previous Master Plan.

DRAFT Dated 2017-12-18

1. LAND USE AND ZONING/RECOMMENDED IMPLEMENTATION

In accordance with State Law, this Plan recognizes the need to encourage the following:

1. Streamlined review of applications for development within the areas designated for growth in the Plan
2. Use of flexible development regulations to promote innovative and cost-saving site design and protect the environment
3. Economic development in areas designated for growth in the Plan through the use of innovative techniques

The existing zones and total acreage of each zone within the Town limits are as follows:

RR-1	Residential – 1	82.0 acres	38.0 %
RR-2	Residential – 2	12.0 acres	5.6 %
RR-3	Residential – 3	1.0 acres	0.5 %
RR-4	Residential – 4	12.6 acres	5.8 %
C-L	Commercial – Local	1.0 acres	0.5 %
FR	Forest & Recreation	<u>107.0 acres</u>	<u>49.6 %</u>
	TOTAL	215.6 acres	100.0 %

A map (Exhibit A) showing the location of the Town's various zones and the Washington Grove Zoning Ordinance (hereinafter referred to as the Zoning Ordinance and included by reference), are incorporated into this Plan. The layout was first formalized in the Maddox Plat in 1897.

1.1 Residential Zones

RR-1 Zone

The RR-1 zone contains ~~157~~ 158 single-family homes (~~plus one under construction~~) and one church. The minimum lot size, specified by the Zoning Ordinance, is 11,250 square feet, and most homes within the zone occupy parcels composed of more than one of the historically designated lots including the area originally known as the Cottage District. This Plan does not recommend any changes to the permitted land uses, or the existing standards for minimum lot size, set-backs, and heights for the RR-1 zone. To address the significant number of existing homes each located on a lot with lot area substantially less than 11,250 square feet, this Plan recommends realignment of building coverage for residential zones to be based on lot area rather than zone to better protect the character of existing residential areas while creating more equitable opportunities for renovation.

RR-2 Zone

The RR-2 zone contains 49 single-family homes. The minimum lot size, specified by the Zoning Ordinance, is 7,500 square feet, reflecting the historic setting of homes in the area of the Circle and its radiating avenues corresponding to the original Tent District. This Plan does not recommend any change to the permitted land uses, or the existing standards for minimum lot size, set-backs, and heights for the RR-2 zone. To address the significant number of existing

homes each located on a lot with lot area substantially more than 7,500 square feet, this Plan recommends realignment of building coverage as noted for the RR-1 Zone above.

RR-3 Zone (Will need revision if ordinance 2019-XX passes)

The RR-3 zone contains one single-family home. The RR-3 zone was initially established to annex a parcel once owned by the Washington Suburban Sanitary Commission; that parcel has since been re-zoned. The minimum RR3 lot size, specified by the Zoning Ordinance, is 20,000 square feet and is reflective of the minimum lot area requirements of Montgomery County's R200 zoning designation. This Plan does not recommend any changes to the permitted land uses, or the existing standards for minimum lot size, building coverage, set-backs, and heights for the RR-3 zone.

RR4 Zone

The RR-4 zone contains ~~16~~ 17 single-family homes ~~plus one under construction~~. The minimum lot size, specified by the Zoning Ordinance is 18,000 square feet. Most of the homes in the RR-4 zone are located along Ridge Road and comprise the properties that were annexed into the Town to protect within the Washington Grove community the historic rustic rural nature of the road and the character of these properties. This Plan does not recommend any changes to the permitted land uses, or the existing standards for minimum lot size, building coverage, set-backs, and heights for the RR-4 zone.

Add RR4 Cluster Zone: Cator Property layout and development requirements (needs to be assigned) It may be possible to use Bill Roberts write up on the Cluster Zone. Who has this?

Recommendation:

- **Maintain the RR-1, RR-2, RR-3, and RR-4 zones to foster and encourage owneroccupied, singlefamily residences; and to promote new and renewed development to be in physical scale with surroundings and neighbors.**
- **David, Georgette and Deb to work on new recommendation for lot coverage related to lot size.**

Formatted: Font: Not Bold

1.2 Commercial Zone

CL Zone

The C-L zone contains a 1acre commercial shopping center located in the southwest corner of the Town. Historically, the area served as a nexus for transportation, commercial and agricultural activities. It has contained a variety of commercial uses up to the present. The uses permitted now as a matter of right, or by special exception, reflect the Town's efforts to promote commercial uses more compatible with the historic and residential nature of the Town. The resulting permitted uses are characterized by offices, limited personal services, and other commercial uses that are intended not to significantly burden the Town with increased noise, litter, or pedestrian or vehicular traffic. The existing standards for minimum lot size, building coverage, set-backs, and heights for the C-L zone remain-

1.3 Forests, Parks, and Other Town-Owned Land

FR Zone

The Town contains 107 acres of forest and park sites, and for the most part, the ~~latter park sites~~ are scattered throughout the residential areas. The FR (Forest / Recreational) zoning designation is assigned to the two sections of woods that are the remnants of the original forested context of the camp meeting, approximately 50 acres each. Park sites are not within the Forest Preserves. The East Woods, approximately 41 acres, is located in the northeast corner of the Town. Blocks 28 and 33 contain Town-owned lands adjacent to the East Woods and to residences. The West Woods, approximately 48 acres, ~~is located~~ to the west of Washington Grove Lane, along most of the Town's northwest boundary with the City of Gaithersburg. The latter contains Maple Lake. This Plan does not recommend changes to the permitted land uses for the FR zone. (see Section 6.1 for forest preserve issues)

Recommendation:

- ~~Formally abandon any subdivision lot designation for Town-owned lands contained within Blocks 28 and 33, and the same be designated as Forest Preserve. Such formal action will tend to discourage possible disposition of the Town in the future of such property to a private party for development purposes.~~
- Complete a Local Zoning Map Amendment to assign **FPR (Forest Preserve)** zoning to the East Woods parcel delineated on the 2017 East Woods Plat of Survey filed in the Land Records for Montgomery County. **This is intended to provide additional protection for our Forest Preserve.**
- Complete a Local Zoning Map Amendment to assign **FP (Forest Preserve)** zoning to the West Woods. **This will require an updated survey of the West Woods.**
-

Comment [GC1]: Recommended by the Woods Committee and endorsed by the PC and by F&B.

Formatted: Font: Bold

Parks Wrong place for this information, See section 5

~~The largest Town park area, Woodward Park, extends north from Pine Avenue to Boundary Street. This park and the many others within the Town have been secured through original designation, dedication, and through Town acquisition of privately owned parcels when possible. Only one intrusion into Woodward Park of privately owned land remains — lot 22, block 9.~~

Recommendations:

- ~~Acquire lot 22, block 9 as soon as economically feasible when the owner is willing to sell.~~
- ~~Formally abandon any subdivision lot designation for Town-owned lands known as Lot 8, Block 23, and Lot 8, Block 24, and the same be designated as green area. Such formal action will tend to discourage possible disposition of the Town in the future of such property to a private party for development purposes.~~

Other Town-Owned Land

There are some parcels of publicly-owned land in residential areas. (see Section 3.4 Internal Streets and Roadways). Any sale of public land would be considered only after analysis and determination that such sale would be consistent with the Town's Policy for Sale of Surplus Parcels and in accordance with the requirements of State law regarding such disposition of surplus property. In those rare cases, these parcels may be considered for sale. HPC suggests

there should be some discussion of porches on Town land issue with both the easement and the sale solution. Peter volunteered to write 2-3 sentences covering this.

Recommendation:

- **Review identified lots on a case-by-case basis. Determine their potential need by the Town and whether sale would be consistent with the Town's Policy and requirements of State law for sale of surplus parcels. Such sales would only be authorized after enactment of an ordinance to ensure public notice and an opportunity for input during a public hearing.**

1.4 Creation of New "Industrial Services" Zone and "Service Zone" upon Expansion of Municipal Boundary in the Area of Humpback Bridge and Industrial Parcels

The Municipal Growth and Boundary Enhancements element of this Plan, Section 2.2(1) refers to potential expansion of the boundary of the Town to include that property described as "Area 3: Industrial Parcels West of Humpback Bridge." These are the industrial parcels located east of the grain elevators that are part of the City of Gaithersburg limits and west of the County controlled humpback bridge, along the railroad tracks. Historically these buildings were developed to provide commercial services and siding access to the railroad. Also included in the Municipal Growth and Boundary Enhancements element of this plan, in the same discussion of "Area 3", are the railroad tracks and Washington Grove passenger shelter that lie east of the humpback bridge. Finally, the same element includes a discussion of "Area 4: Roberts Oxygen and Adjacent Storage."

Recommendation:

- **In the event of discussion/negotiation toward annexation of any of the parcels identified in Section 2.2(1) as Areas 3 or 4, as discussed in more detail therein, the Town enact new zoning classifications in anticipation of annexation which may include service and/or local/light industrial and/or research uses.**

2. MUNICIPAL GROWTH AND BOUNDARY ENHANCEMENTS

2.1 Growth within Town

(2.1.1) Historic Growth Patterns

Roy McCathran, the Town's first mayor, referred poetically to Washington Grove as "a town within a forest, an oasis of tranquility and a rustic jewel in the diadem of the great free state of Maryland." Amazingly, this is as true today as it was in 1937 when he spoke these words. Only the dramatic effect has been heightened by the intense urban development now surrounding Washington Grove. The fact that Washington Grove has survived, integrity intact, may bear witness to its origins.

In 1873, the Washington Grove Camp Meeting Association was formed, and a parcel of 267.5 acres was purchased along the new Baltimore and Ohio Railroad Metropolitan Line. The earliest camp meetings lasted 10 days to 2 weeks, and involved more than two hundred fifty campers and 10,000 visitors. Over the decades, religious programs were replaced with secular activities, and community facilities evolved to meet the changing demands. Eventually tent sites became cottages for year-round residents, trees continued to be given priority, and a permanent Town government was established in 1937.

The Town's land use plan for the original portions of the Town is built upon two spatial forms. First is The Circle with its seven radiating avenues which was the focus of the original community, known as the Tent District with each such avenue designated as a walkway. Building upon this is the second form, known as the Cottage District, a regular grid of alternating roads and walkways. The common network of maintained but un-paved walkways provides a unique organizing element for the community. Most of the original ~~houses-cottages~~ are oriented to face a walkway with a welcoming porch. This land use plan has supported a culture of social interaction dating from the original camp meeting and maintained as houses were built into the mid-20th century. There are no sidewalks at the roads that run behind the houses, and five Grove houses do not have direct vehicular access. There have been several areas annexed into the Town that have followed a more common form of houses facing streets.

(2.1.2) Capacity for Development

The roads and walkways as designated with the original plats, and subsequently updated, provide the block boundaries for the subdivided land within the Town. These blocks historically were subdivided into lots to accommodate the Camp Meeting activities, and a significant number of homes in Town remain on these earlier lots, though many of these lots have an area or width below the minimum requirements specified in the Town's zoning ordinance. The ordinance provides for these sub-standard situations, allowing continued use and rebuilding of non-complying buildings. However, where land of sufficient area or width is in common ownership on July 1, 1964, or at any subsequent time, the ordinance provides that no construction shall take place on any parcel or tract of land of less area or width than otherwise specified in the ordinance. The Town's Planning Commission works with property owners in Town to

understand the development capacities and subdivision opportunities. For the newer portions of the Town, a more typical suburban subdivision scheme has been permitted.

In order to plan for growth within Town, the potential for additional homes was analyzed based on current zoning and the established block boundaries. The first analysis, based on current subdivisions within the blocks (“Infill Development”) provides the most likely capacity potential, given the placement and ownership of existing homes. The second analysis includes the possibility of resubdivisions (“Re-development”) which are less likely to occur because of subdivision costs, but rising property values may inspire removal of an existing home and resubdivision to maximize a return on investment. This analysis was conducted on a block-by-block basis, through spreadsheet compilation of the area and applicable minimum lot size for each parcel and each block segment.

Infill Development: Potential for additional homes based on current zoning and subdivisions

Re-development: Potential for additional homes based on current zoning, but also assuming re-subdivisions within current blocks

Zone	Existing Homes	Infill Development	Redevelopment
RR-1	157 <u>158</u>	+ 20 <u>18</u>	+ 32 <u>31</u>
RR-2	49	+ 2	+ 4
RR-3	1	+ 1	+ 1
RR-4	16 <u>17</u>	+ 13 <u>12</u>	+ 17 <u>16</u>
Totals	223 <u>225</u>	+ 36 <u>33</u>	+ 54 <u>52</u>

These projections for additional homes are not exclusive; that is, the potential for additional homes from re-development includes and extends the potential from infill development. Thus, for each zone, the projection for re-development represents the maximum growth potential for additional homes within that zone.

(2.1.3) Accommodating Growth within Town

The infrastructure investments for water supply and wastewater treatment associated with accommodating additional homes within the RR-1 and RR-2 zones will be significantly less than that required in the RR-4 zone. All homes within the RR-1 and RR-2 zones receive water and sewer service from the Washington Suburban Sanitary Commission (WSSC), and the RR-1 and RR-2 zones already are substantially built out with complete networks of water and sewer pipes adjacent to developable parcels. By contrast, the RR-4 zone has been developed to only half of its potential for homes, and 15 of the 16 existing homes within the RR4 zone rely on individual wells for water. While all existing homes have WSSC sewer service, each additional RR-4 home requires a substantial installation to connect to the primary sewer lines. Also, there is a concern regarding groundwater quality and well recharge for RR-4 zone properties along Ridge Road as a

result of the recent County approval for the Piedmont Crossing development adjacent to the Town. Discussions have included the need for monitoring these existing wells, and for contingency planning to finance possible installation of public water supply mains and distribution lines to serve the RR-4 homes, existing and new.

The incremental stormwater management for homes within the RR-1 and RR-2 zones would be handled with the Town's network of almost a mile of installed and maintained storm drain pipes and channels, more than half being grass swales and open ditches that allow for absorption. These drainage pipes and channels convey the Town's stormwater runoff to the Town's East Woods and West Woods, historically located and preserved to absorb the stormwater while also providing for passive recreation and environmental rejuvenation. The larger lot sizes within the more recently annexed properties of the RR-4 zone (minimum 18,000 square feet) would continue to insure stormwater can be accommodated on-site and/or with local improvements as part of the subdivision and development process.

A primary concern associated with additional potential homes is accommodating the needs of the additional Town residents. Using the current average occupancy (537 residents in 225 homes = 2.4 residents/home), the associated population increases are as follows:

Infill Development:	+36 homes	x 2.4 =	86 additional residents
Re-development:	+54 homes	x 2.4 =	130 additional residents

The 2006 Census estimate of the Town's population was 537. This growth from the official Washington Grove 2000 Census count of 515 included the annexation of 12 homes during that time period. The potential for additional homes from re development throughout the Town has an associated population increase of 130 additional residents. The projected total of $537 + 130 = 667$ reflects the maximum growth potential for the Town's population under this plan. Since this maximum growth potential was derived via block-by-block analysis of current residential land and existing zoning, the land capacity within present municipal boundaries can accommodate this population increase.

The Town government expenses for these additional residents are associated with infrastructure (e.g. Parks, Roads) and services (e.g. Waste Collection, Recreation, Administration). The Town's largest expense category is "Parks" -- approximately 23% of the Town's annual expenses after applying offsets of targeted income categories. The Town has set a high community standard for "Parks" expenses to support active and passive recreation. An increased population will increase the use and demand for the Town's parks, and the increased expenses for this category would be covered using increased income from "Real Property Tax" for the additional homes.

The Town's second largest expense category is "Streets, Roadways, and Alleys" -- 17% of the Town's annual expenses, but only 10% of the expenses after the income from the "Highway User Revenues" category is applied. Since these projections for additional residents involve infill development, there is no associated increase in road mileage, but there would be an expected heavier use of the existing roads and a resulting increase in expenses for repair and

repaving. Some of this increased road expense would be covered with an expected increase in “Highway User Revenues” from the number of automobile registrations, and some would be covered by expected increases in “Income Tax” for the additional residents, but most of the load would be covered by the increased income from “Real Property Tax” for the additional homes.

To offset expenses for major Town services, the Town has established user fees such as the “Dwelling Tax” (11% of annual income) that is set to match the “Waste Collection and Disposal” expenses for homes in Town -- and this income category would be adjusted to accommodate the expenses for the increased homes. The Town has also established a high standard of public commitment to “Recreation” services, and an associated category of “Recreation Program User Fees” (6% of annual income), and this income would likewise be adjusted to accommodate increases.

Other services to accommodate growth within the Town, e.g. public schools, libraries, police, fire, and emergency medical, are provided through County agencies. For public schools, the MCPS Superintendent’s Capital Improvement Program provides planning projections for the Gaithersburg Cluster, including the elementary, middle, and high schools serving students from Washington Grove. While the above Washington Grove population increase projection may well result in a total increase of 27 students (using an estimate of 0.5 students/dwelling unit) for these schools, such an increase is dwarfed by nearby development approvals in the Shady Grove area. The two most recent residential approvals closest to Washington Grove will add more than 500 dwelling units, so a detailed school impact analysis here is not useful. Likewise, this local increase in Shady Grove area dwelling units will significantly impact library services as well, and a new County library facility is being planned nearby along Crabbs Branch Way, a short walk from Washington Grove. County planning also is underway for a new police facility in the Shady Grove area, and the Town has representation on the Gaithersburg-Washington Grove Fire Department Board to enhance coordination. The Town’s consultation with County officials and agencies, as well as with the Town’s municipal neighbors, will ensure consideration of the above development capacities and a coordinated implementation of this growth element.

2.2 Municipal Growth Areas

To control and coordinate the physical development of areas near the Town's boundaries with Montgomery County and adjacent jurisdictions, the Town adopts municipal growth areas for the Town through the master planning process. These municipal growth areas have potential for annexation into the Town's corporate limits. Clearly, what is in the Town's best interests is the lessening of bordering impacts with the continuing goal of preservation of this historic Town.

The original 267 acre property purchased by the Camp Meeting Association in 1873 was a portion of the Nathan Cooke farm and included areas outside the current municipal boundaries. These areas consist of property across Washington Grove Lane, property adjacent to the Humpback Bridge extending to Hershey’s Restaurant in the Oakmont development, and the Conservation Meadow.

The review should continue of adjacent properties which could be included in Washington Grove. ~~This revision of the Town's Master Plan is very cautious in its approach to annexation, as was the direction taken in the earlier plans. However, t~~The Town has completed ten annexation actions to better define community boundaries while insuring a capability to continue to provide municipal services with the current governmental structures. ~~Now that more of the Town's borders are permanently defined, the municipal growth areas become more narrowed and focused.~~

This Master Plan extends a vision toward the future preservation and protection of the Town, and refines the municipal growth areas to reflect logical boundaries as well as the original property, e.g. the ~~railroad tracks~~ Oakmont Subdivision to the south, the City of Gaithersburg to the west, and the Piedmont Crossing development to the east. Within these bounds are ~~four~~ five municipal growth areas that need focused attention.

(2.2.1) Four-Five Municipal Growth Areas

Area 1: Legacy Open Space Field along Ridge Road: ~~The former Casey agricultural property has been proposed for development for several years. In 2002 a portion of the property adjoining the Town's existing Eastern boundary was designated as Legacy Open Space [LOS] property in accordance with the County's Legacy Open Space Master Plan, with the stated intent to maintain that portion of the property as open space for the primary purpose of protecting the historic character and setting of the Town of Washington Grove. Notwithstanding the identification of the LOS in that particular Master Plan, the County's Area Master Plan would still possibly permit development of the LOS according to the Area Master Plan's land use and zoning categories imposed for residential use, and neither of those plans would prevent the acquisition of the LOS by another political subdivision, such as Montgomery County, for possible uses contrary to the open space contemplated by the Legacy Open Space Master Plan. Any even marginally intensive use of the property adjoining Ridge Road could and no doubt would have significant adverse effects on the historic nature of the Town. The land owner received approval for a Preliminary Plan of Subdivision from the Montgomery County Planning Board in July of 2005, which included the recommendation as part of that plan for setting aside approximately 12 acres devoted to LOS purposes for the protection of the Town's historic character. No plats have been recorded and no spade of earth has been turned in connection with that proposed development, despite the passage of over 3 years since the preliminary plan approval. Indeed, most recently, the approval of that plan was extended, and the plan was amended, by action of the Montgomery County Planning Board at its meeting of October 2, 2008.~~

~~Given the lack of uncertainty that the LOS would remain open space in perpetuity under the designation in the Area Master Plan's land use and zoning categories, the Town Council, by Resolution No. 2005-06, authorized the institution of an action to acquire the LOS by the Town's power of eminent domain pursuant to the authority granted to it by the Town Charter and state law. That action is pending. The Town should continue to pursue acquisition of the LOS, inasmuch as the Town is in the best position to maintain and preserve the LOS field inviolate for the stated purposes of protecting the Town in the first instance. The Town's role in that regard is driven home in light of the fact that the Maryland National Capital Park & Planning Commission~~

~~[the Commission] has repeatedly refused to provide a sufficient and legally enforceable guarantee to the Town that the LOS, even if received and maintained by the Commission, would not be devoted to a substantially different use at some time in the future, a use which may be contrary to the County's own Legacy Open Space Master Plan, and contrary to the stated necessity of protection of the Town and its historic setting. Following acquisition of title to the LOS, the Town, as the then property owner, should immediately annex the same into the corporate boundaries of the Town and simultaneously place the same in the zoning classification FR—Forest and Recreational. The proposed land use is passive recreation, suitable for continued habitation by birds and small animals. Other than maintenance and due diligence to limit inappropriate activities on this field, annexation would not involve other impacts on Town services. Financing of the field maintenance and monitoring activities is anticipated via general municipal revenues.~~

In 2000, the Town was approached by the contract purchaser (Oxbridge) of the approximate 67 acre Casey agricultural property, which abuts the town to the south. The proposed development was to include high-density residential development adjacent to Ridge Road, including the approximate 12 acre field on upper Ridge Road (the Meadow). During the subdivision process, the Town was successful in achieving the designation of the Meadow as "Legacy Open Space (LOS)" in the Legacy Open Space Functional Master Plan of Montgomery County, and this was included in the revision of the Shady Grove Sector Master Plan. In July 2005, the Montgomery County Planning Board (the Board) approved a preliminary plan of subdivision which recognized the importance of the Meadow as an LOS, in particular to protect the historic character of the Town and which included a condition for dedication of the Meadow to the Maryland-National Capital Park and Planning Commission (M-NCPPC) by Oxbridge. In return for support of the Town on the subdivision plan, Oxbridge dedicated the Meadow to M-NCPPC for designation as a LOS park.

In the summer of 2005, certain County Council members indicated that they would like the Meadow to be purchased by the County for a service park facility being planned for relocation because of redevelopment of the existing service parks near the Shady Grove Metro Station. The Town viewed this potential action as undermining efforts to protect the Meadow in the long term, since the LOS designation was not permanent and could be withdrawn at some later date. Consequently, a Town Meeting was held on August 31, 2005, where residents voted to approve the use of the municipal power of eminent domain to purchase the LOS for use as a "public park and a passive recreational resource in a natural state, and which will also continue to afford protection to the historic character of the Town into the future."

Consequently, the Town (plaintiff) filed a condemnation lawsuit in December 2005 with the Circuit Court of Montgomery County. The defendant was Oxbridge, which pulled the M-NCPPC into the lawsuit as a third party defendant for a declaration that the Town's taking of the Meadow would constitute a failure to dedicate the Meadow as required by the July 2005 approved subdivision plan. Litigation followed.

In early 2007, the Town filed a motion with the Circuit Court to determine that it had the legal authority to condemn the Meadow and that its purpose in condemning the property for open space and parkland was a public purpose. In April 2007, Toll (who purchased the land from

Oxbridge) executed a document entitled “Deed of Dedication” to M-NCPPC to comply with the dedication condition of the approved subdivision plan. Based upon the Deed of Dedication, the M-NCPPC and Toll re-asserted the argument that the Town could not condemn the Meadow. The Circuit Court granted the Town’s motion and denied the motions filed by the M-NCPPC and Toll, and determined that the Town had both the legal authority and an appropriate “public purpose” to acquire the Meadow by use of its power of eminent domain through condemnation. It also ruled that the Deed of Dedication was no more than an easement and did not transfer ownership rights to M-NCPPC.

Subsequently, the Town filed a motion with the Circuit Court to dismiss M-NCPPC from the condemnation lawsuit as a third-party defendant. The motion was granted but M-NCPPC filed a motion to intervene as a defendant. The Court denied that motion and M-NCPPC filed an appeal with the Court of Special Appeals, but requested that the Court of Appeals (Maryland’s highest court) take the appeal. In March 2009, the Court of Appeals ruled that (a) the M-NCPPC had enough of an interest in the Meadow to be a defendant and (b) that a condemnation action such as the Town’s lawsuit, attaches at the time it was filed (in this case in December of 2005), and that any subsequent purchaser/donee of property will generally take the same pursuant to the pre-existing equity interest of the Town if it succeeds in the condemnation lawsuit.

In early November of 2009, the final “record plats” for the subdivision were to be considered by the Board, and by then the subdivision was known as “Piedmont Crossing.” The specific plat for the Meadow indicated a fee simple transfer of Toll’s interest in the Meadow to M-NCPPC. The Town requested a hearing before the Board, and on November 5, 2009, the hearing resulted in the Board recognizing that the April 2007 Deed of Dedication from Toll as compliance with the dedication condition of the approved preliminary plan of subdivision did not require Toll to transfer its fee simple interest in the property to M-NCPPC. However, the Chairman of the Board made it very clear that the M-NCPPC could still accept Toll’s underlying fee simple interest as a “gift”, and the Board’s legal counsel disclosed that Toll intended to “donate” the Meadow to the M-NCPPC. In fact, a few weeks later our legal team was informed that Toll and M-NCPPC had an agreement and a deed conveying the fee to the Meadow had already been delivered to M-NCPPC by Toll prior to the Board’s November 5 hearing, which was to be recorded upon final recordation of the record plats. Our legal team asked the Circuit Court for a temporary restraining order and preliminary injunction preventing Toll from “giving” its underlying fee simple interest to M-NCPPC. The Court entered injunctive relief ordering that the deed be returned to Toll, and prohibited Toll from “giving” or transferring its retained interest in the Meadow to M-NCPPC or any other entity during the litigation.

In early 2010, the Town Council authorized our attorneys to suggest a settlement agreement to the opposing parties; namely, that the Town would acquire Toll’s interest in the Meadow subject to M-NCPPC’s public easement. After negotiations and draft revisions, the agreement was approved by all parties. At a Town Meeting on September 15, 2010, residents voted to modify the Town’s annual budget to increase the limitation on total expenditures by \$100,000 for the purpose of acquiring the LOS property. On September 17, 2010, the Town, Toll, and M-NCPPC signed an agreement that provided for the Town to purchase Toll’s fee simple interest in the Meadow for the total sum of \$100,000 and acknowledged the existing 2007 Deed of

Dedication (easement) from Toll to M-NCPPC. The closing occurred on October 4, 2010, and a stipulation of dismissal to conclude the litigation was filed with the Circuit Court on October 6, 2010. The Town now owns the Meadow and has the legal right to object to any substantial change in the future use of the property. M-NCPPC has an easement and has agreed to provide maintenance for the Meadow in coordination with the Town. The Town's future goal includes annexation of the Meadow, now known as the "Washington Grove Meadow Conservation Park."

Area 2: Residences on Western Side of Washington Grove Lane: A standing offer of possible annexation exists to the three residences remaining between the Town's corporate limits and the limits of the City of Gaithersburg. Annexing these three properties (total area is 54,763 square feet) into one of the Town's existing residential zones would reinforce the historic residential character of this area and continue the compatible relationship with the neighboring, low intensity, agricultural implement business. There are no significant infrastructure requirements associated with annexing these three already developed residential properties, and the impacts of extending Town services can be accommodated from general municipal revenues. The zoning for this area is proposed to be RR-1 – Residential, One Family, Detached.

Area 3: Industrial Parcels West of Humpback Bridge: These are the industrial parcels located east of the City of Gaithersburg limits and west of the humpback bridge, along the railroad tracks. One of the parcels in this area is already owned by and within the corporate limits of the Town, and developed as "Railroad Park" to commemorate the historic ties to the B&O Railroad. Creating a new Industrial Services zone within the Town and annexing the other six parcels (total area is 35,652 square feet) into this new zone within the Town will enable development of local industrial uses that can be compatible with the historic character of Washington Grove. Services for this area would involve subdivision and business development reviews and approvals. The Town would also represent the property owners in discussions with the County on the future of the humpback bridge and impacts on these properties. The Town services would be financed from general municipal revenues. The Town should also explore the possibility of annexing both the railroad tracks and Washington Grove passenger shelter that lie east of the humpback bridge. The zoning for this area is proposed to be S-1 – Services. The specific uses permitted in this proposed new zone would be negotiated with property owners as part of the annexation process, such uses to be compatible with the Town and appropriate for these entrance areas.

Area 4: Roberts Oxygen and Adjacent Storage: Considering rising property values and the associated pressures of 'smart growth' within the Shady Grove Master Plan, the Town should pursue annexation discussions with owners of the Roberts Oxygen ~~and adjacent storage~~ parcels. Current uses on these two parcels of 7 and 5 acres are incompatible with the adjacent Town residential properties. Redevelopment under County zoning could bring even more undesirable results should they be converted to high density housing or other incompatible uses. Issues such as truck access, and noise and visual buffering from Town residential areas are of prime concern, and further exploration is needed to assess whether current use and operations violate County law. Annexation discussions should focus on low intensity industrial/research and development uses that provide compatible buffering adjacent to residential areas while reflecting an upgrade

in property condition and economic value. Services for this area would involve subdivision and business development reviews and approvals, and the Town services would be financed from increases in general municipal revenues, including Real Property Tax and Operating Property Tax. The zoning for this area is proposed to be S-1 – Services, as described above.

Area 5: Segment of Historic Railroad Corridor and Portions of Oakmont Subdivision:

This area includes: 1) a segment of the historic Baltimore & Ohio Railroad corridor with the Washington Grove station and the Humpback Bridge, which played a central role in the history of Washington Grove, and 2) portions of the 1888 subdivision of Oakmont that contribute to the original setting of railroad station and Washington Grove, including parkland that formed the centerpiece of the development, a former general store and post office at 17030 Oakmont Avenue, a former boarding house at 16950 Oakmont Avenue, and a residence at 16960 Oakmont Avenue.

1) The Washington Grove segment of the 66-foot-wide railroad corridor extends along the southern municipal boundary of Washington Grove between the intersection of Railroad Street and Oakmont Avenue (at Aitcheson Crossing) on the south, to the eastern municipal boundary of the City of Gaithersburg. In the 1870s, the B&O Railroad built a timber, pony truss bridge about 600 feet northwest of the Washington Grove station. By 1945 the railroad replaced the nineteenth-century structure with a new three-span timber bridge in the same location, with a humpback shape. In 1986, CSX Transportation took over ownership and authority of the B&O line, and two years later carried out a major rehabilitation that replaced the timber beams with steel I-beams. Additional changes occurred in 2001, when the bridge was re-decked and the railings were replaced, and in 2009, when the timber bents supporting the bridge superstructure were replaced in kind. The most recent rehabilitation occurred in 2014 when the cap timbers of the bents were replaced with new cap timbers to raise the height of the bridge and support five new curved, steel I-beams. New wood decking cut to the original 22-inch width and new laminated guardrails were also installed. The 2014 rehabilitation preserved or replaced in-kind the character-defining elements of the structure related to its dimensions, details, profile, approaches, and landscape.

2) Within these portions of the first subdivision of Oakmont, a “Park” was dedicated in 1988 “for public recreation, no permanent buildings are to be erected thereon, no spiritous liquors or intoxicants are to be sold or given away thereon.” Over many years, this park has been neglected and abused with excessive dumping of wood chips and unauthorized use for sale of used merchandise, and the surviving greenery is being overwhelmed by non-native invasives. In 1889, the founders of the subdivision built a two-and-a-half story, frame building on one of the lots (now 17030 Oakmont Avenue), and the building operated as a general store and also hosted the Washington Grove post office for over 80 years until 1978. In the 1970’s, Charles and Doris Hershey opened a tavern in the building, and today the building continues to operate as Hershey’s Restaurant. The early twentieth-century houses at 16960 Oakmont Avenue and 16950 Oakmont Avenue were developed at the north end of the subdivision of Oakmont directly across the railroad tracks from Washington Grove.

The Washington Grove segment of the railroad corridor, and these portions of the 1888 subdivision of Oakmont, are essential attributes of the community due to association with the establishment of Washington Grove and its growth and development into the twentieth century.

Inclusion within this municipal growth area is intended to facilitate preservation of the natural and historic features, and the character and setting of this historic community.

(2.2.2) Municipal Growth Area Strategy

It is the Town's intent to assert its interest in the municipal growth areas in order to forecast the future needs for Town and County services, and to establish responsibility between the Town and the County governing bodies for developing and maintaining these public services. The Town will work on a cooperative basis with the County Council, the County Executive, the City of Gaithersburg and other public agencies in the development of plans and programs that affect parcels within the municipal growth areas. It is also the Town's intent to provide notice to owners of properties within the municipal growth areas that annexation will be pursued when annexation is deemed in the public's best interest to further the goals and objectives of this Plan.

Recommendations:

- **Monitor the areas within the municipal growth areas for zoning/rezoning activities and opportunities to discuss potential annexations issues with property owners and other interested parties**
- **Meet and confer with appropriate County agencies and the City of Gaithersburg regarding this municipal growth element**

2.3 Town Boundary ~~Enhancements~~

~~Within the corporate limits, there is a need to complete the survey work required to confirm the exact boundaries of certain of the original Town blocks, public rights of way, and public parks near the Circle and radial avenues and to record the updated Town plats. Surveying and recording these block corners will enable the Town to have an accurate public land record and potentially reduce costs to Town residents to obtain boundary surveys for their properties in the future. Boundary surveys should be required of property owners seeking large additions or alterations where property lines are ambiguous in nature. (Move to next section 2.3(2))~~

(2.3.1)

As increased development "blurs" the boundaries and historic nature of the Town, a plan for enhancing the entrances to the Town and delineating its borders needs to be developed and implemented. The visual impacts of industrial uses at the Oakmont Avenue/Railroad Street entrance and of the commercial/industrial uses at the East Diamond Avenue/Washington Grove Lane entrance ~~degrades~~ conflicts with the very essence of "The Town within a forest". ~~Research should be undertaken to determine the historic structures and locations of the Town's gateways in the past. Visitors approaching the town on Washington Grove Lane from Mid-County Highway may not know they are entering a town and, if they do, believe they are driving along the border of the town and not *through* a town. The same might be said for most of Railroad Street. This misperception results in excessive speeding, littering, and even a sense of exclusion for some of our residents living along these thoroughfares.~~

~~Posthung signs that identify~~ Signage which identifies Washington Grove needs to be installed on public roads at entrances to the Town. The signs should be integrated with landscaped areas to reinforce the character of Washington Grove. Such entrances would include: Washington Grove Lane at Daylily Lane, Railroad Street at its intersection with East Diamond Avenue and Washington Grove Lane; the humpback bridge crossing on the Oakmont side; and the Oakmont Avenue/Railroad Street grade crossing.

~~Maintenance of a treed separation buffer from the development proposed to occur south of the easternmost segment of Ridge Road will require delineating and maintaining the strip of land owned by the Town along that road. The Town now maintains the strip of Town-owned land along the south side of the easternmost segment of lower Ridge Road. This provides about half off the wooded buffer between the Town and the new Shady Grove Crossing development.~~

A planning document should be developed to guide and coordinate all the opportunities and efforts to improve the edges of Town. The effort should ~~be to provide~~ include quality but low maintenance landscaping; ~~and~~ signage for entrances at these Town boundaries to reflect the historic nature, scale and significance of the Town including reference to National Register Status and history as appropriate; ~~—A a general Town policy toward eliminating unnecessary signs, both at the boundaries and within the Town; and vehicular speed limits, should be encouraged.~~

Recommendations:

- ~~● Continue funding and coordination of the ongoing re-survey, and install monuments at Town block boundary corners; ensure the inclusion of the updated Town plats in the public land records as soon as possible after each block is completed. (next section)~~
- Enhance the entrances to the Town with appropriately designed landscaping and signs at the Town entrances. Vehicular speed limits should be incorporated. Approaches should be delineated with aesthetically appropriate markers.
- Work with property owners, County agencies, and the City of Gaithersburg to screen with plantings and aesthetic fencing the industrial and residential areas bordering the Town.
- Approach businesses that border the Town, as well as the owners of the Towne Crest apartments, to offer Town assistance in improving the aesthetic characteristics of their properties with the goal of enhancing Town borders and entrances.
- ~~● Delineate, using permanent survey markers, the strip of land owned by the Town south of the easternmost segment of Ridge Road, and plant and maintain that strip so that it serves as a buffer free of vehicular crossing traffic. (already done)~~
- Maintain entrance signage and add reference to National Register Status and history.
- Develop masterplanning documents to guide improvements to the Railroad Street, and Washington Grove Lane and Ridge Road corridors.
- Develop plans for enhancing the historically forested areas and viewsheds at our borders

Formatted: Font: Not Bold

- Encourage developments that border the Town to recognize its historic character and ensure commensurately compatible construction.
- Research should be undertaken to determine the historic structures and locations of the Town's gateways in the past and the historic buildings at the Commercial corner in order to assist compatible integration with the Town

Formatted: Font: Bold

(2.3.2) Boundary Surveys

Within the corporate limits, there is a need to complete the survey work required to confirm the exact boundaries of certain of the original Town blocks, public rights of way, and public parks near the Circle and radial avenues and to record the updated Town plats. Surveying and recording these block corners will enable the Town to have an accurate public land record and potentially reduce costs to Town residents to obtain boundary surveys for their properties in the future. Boundary surveys are now required of property owners seeking additions or alterations where property lines are ambiguous in nature.

Recommendations:

- Continue funding and coordination of the ongoing re-survey, and install monuments at Town block boundary corners; ensure the inclusion of the updated Town plats as required.
- Active Boundary Maintenance should be performed on a regular basis.

2.4. Historical concerns. Concerns for historic features which lie within the zones/categories above and are identified by the Town's forthcoming National Register update shall receive consideration in planning and treatment.

Formatted: Justified

3. TRANSPORTATION

The original ~~subdivision~~ plan for Washington Grove, developed by its founders in the late 19th Century, established a concept of pedestrian walkways separated from vehicular ways, and interspersed with numerous parks and open spaces.

The streetscape, comprised of alternating streets and pedestrian walkways, with the Circle anchoring its center, is a remarkably intact reminder of Washington Grove's camp meeting period. Its "avenues" are grass or gravel covered and reserved for pedestrians only, while vehicles are directed to streets that are its "roads."

The streetscape's most unusual component, a radial-centric street layout lying at its core, is based around a central open space (the Circle), with avenues radiating outwards like the spokes of a wheel. With the exception of Washington, D.C. and Detroit, Michigan, the radial-centric street design was employed exclusively at camp meeting grounds. There are only eight surviving examples of Post-Civil War camp meeting grounds with radial-centric layouts. Washington Grove is among them. The original core of our streetscape was in place by 1875. During the initial camp meeting seasons, its central open space (the Circle) would have been the site of open air preaching and conversions, holding perhaps a speaker's platform and benches. By 1877, a tabernacle had been constructed within this space, able to accommodate 500 worshippers.

During the years immediately before and after the turn of the century additional avenues were laid out and "perfected." The details of this history suggest that the avenues lying between the train depot and the Circle, together with the avenues centered around the Circle, were the portion of the streetscape created to serve a primarily "spiritual intent." Washington Grove's roads can be seen to be the portion of the streetscape created with more secular purposes in mind.

This layout and pedestrian walkways are ~~distinguishing features contributing elements~~ cited ~~in~~ the for inclusion of the Town on the National Register of Historic Places. This legacy must continue to be protected and preserved for future generations.

Since the adoption of the 1995 Master Plan significant changes have taken place in the area surrounding Washington Grove which have included major implications for transportation planning. Those changes include:

- The Shady Grove Sector Plan, adopted by Montgomery County in 2006, calls for dense residential, multi-use development centered around the current Shady Grove metro stop, as well as a new transportation hub with a ~~train stop~~ rapid bus stop.
- The InterCounty Connector (ICC) with a major interchange neighboring Washington Grove, recommended by the Montgomery County Council and approved by the State of Maryland, ~~is under construction~~ has been completed.
- The City of Gaithersburg has ~~approved plans for~~ undertaken major new development in Old Town Gaithersburg.

- ~~The land adjacent to Ridge Road that is currently open fields is slated for development within the life of this master plan time period. The land adjacent to Ridge Road has been developed into the Shady Grove Crossing development and the remaining legacy open space field is now the Washington Grove Conservation Meadow Park (see description in Section 2).~~
- ~~The parcels of land between the ICC interchange and the Town owned Meadow have been procured by Montgomery County with plans to complete the connection of Amity Drive to Crabbs Branch Way and construction of playing fields.~~

Those changes ~~will~~ bring intense development with greater overall traffic in the area surrounding Washington Grove. To ensure the existing, historic community of Washington Grove is preserved, residential roads at the Town's periphery and within the Town must be protected from additional traffic. The Town is committed to ensuring that roads at the edges of Town (including Washington Grove Lane, Railroad Street and Ridge Road) remain in keeping with the residential and historic nature of Washington Grove. This is critical to preserving the quality of life for residents in terms of noise, safety, environment, history and aesthetics. These roads should remain rural in nature with the primary goal to serve local residential users. Speeds and traffic volume should be kept low and consistent with the residential nature of the area. In addition, roads internal to the Town must be kept safe and pedestrian friendly by continuing to be protected from cut-through traffic.

Walkways

One of the most unique attributes afforded to residents of the Town are the internal walkways. These walkways offer residents and visitors an opportunity to stroll through a bucolic residential setting not normally found in a metropolitan area. As tract after tract of surrounding woodland and fields fall prey to development, the preservation of these walkways becomes an increasingly important part of that which defines the character of Washington Grove.

Grove Avenue is the main artery in the Town, originating as a path or rough roadway, connecting the train depot to the Circle. Disembarking from the train and entering the well-shaded grounds, camp meeting participants were entering a world that was distinct from the hot and crowded everyday world in which most of them normally lived and worked. Progressing down Grove Avenue they would catch sight of the Tabernacle, set in the distance within its circle of consecrated ground. Gradually Washington Grove's seasonal canvas tents gave way to more solid and permanent cottages. By 1886, Grove Avenue had been platted and cottages constructed along its sides. The trustees sought to set aside Grove Avenue for other than utilitarian purposes envisioning "... a public promenade only ... a proper and ample walk through the center. . . "
By 1890, three other avenues had been opened, South (now Brown Street), Chestnut, and Maple. Within a few years arrangements were being made for "the perfecting" of various other "roadways," an effort that was finally completed in 1896. Initially the avenue was "... well rounded with clay so as to shed water from the center." After this new clay surface was "rolled," it was then topped with two to three inches of "fine stone" purchased by the Association and delivered to Washington Grove by the Baltimore and Ohio Railroad. Having compacted the layers with a "heavy roller" (most likely steam powered) the job was considered done.

Formatted: Font color: Auto

Within developed areas of Town, the walkways require regular maintenance. Although these walkways include partially graveled areas, a few sections remain with grass only or attempts to grow grass. Gravel along Town walkways helps to convey a sense of public access, an invitation for pedestrian use, and year-round access for emergency vehicles. Given the density of Town homes and the Town house numbering system (a majority of houses front on walkways) as well as the location of fire hydrants, the walkways within developed areas of Town also provide essential emergency vehicle access. (Note: Resolution 6-82 designates all Town walkways as Fire Lanes.) Concerns have been raised about excessive vehicular use of walkways.

Formatted: Highlight

Recommendations:

- Continue use of gravel for all to maintain walkways within the developed areas of Town ~~to provide a more uniform appearance~~, allow a sense of public ownership, invite pedestrian use, and insure year-round emergency access ~~for emergency vehicles~~.
- Increase public awareness of permitted vehicle use of walkways as designated in the ordinance.
- If instances of excessive vehicular use are numerous, consideration should be given to erecting a barrier, as long as its design permits emergency vehicle access.
- Periodically review walkways to assess need for trimming adjacent shrubbery to maintain usable widths, to remove any barriers and encroachments that would impede access by emergency vehicles, and to otherwise ensure they are reasonably maintained.
- Continue placing benches at intervals along walkways (sites for benches to be determined as benches are donated)

~~Streetlights, Walkway Lights, and Utilities~~ Move all to Section 4

~~The Town has about 100 streetlights along its roads and walkways. Most have incandescent bulbs, although a few mercury (blue) and sodium (orange) vapor fixtures have been installed. The cost for electricity and maintenance of Town streetlights is significant and growing. This reflects more frequent maintenance and less energy efficient power usage of the incandescent bulbs. A proactive solution by the Town can be beneficial, for cost and for energy conservation.~~

~~While developing a modernized, more efficient lighting system, consideration should be given to light trespass and light pollution. Light trespass refers to glaring light that crosses property boundaries and causes an annoyance by reducing others' ability to see clearly or by shining in others' windows. Excessive spill over light or over illumination obliterates the beauty of the night skies, wastes energy, can be an annoyance to neighbors, and actually can reduce security because bright, glaring light at night creates dark shadow where criminals can hide and prevents the eye from properly adapting to darker areas.~~

~~The Town often suffers from power outages, particularly from storm damage with tree limbs knocking down power lines.~~

~~Recommendations:~~

- ~~Develop a plan for putting all wiring underground so whenever repairs or significant work is done in Town, wiring will be moved underground. As part of this plan, all new development and new construction of buildings should incorporate underground placement of utilities to service such structures. Part of this conversion plan needs to identify locations for all light poles, so as utilities go underground and utility poles are removed, new lighting can be installed without loss of coverage.~~
- ~~Explore sources of funds to assist with placing existing wiring underground (e.g. a Federal energy assistance grant)~~
- ~~Develop a plan to replace the existing streetlights and walkway lighting system with a more efficient system that also preserves safety and is in keeping with the historic aspect of the Town, yet minimizes glare, light trespass, and light pollution. The plan should consider differentiating lighting for roads, walkways and recreational facilities; (e.g. use of foot level lighting along sections of the Town walkways, rather than pole lighting). Lighting should be chosen to illuminate only the target area using only the amount of light needed.~~

3.3 Parking Policy

Encroachments on public property on an ongoing basis, including the regular parking of vehicles on public property, detract from the bucolic nature of the Town and may create safety problems. In some more densely built sections of the Town, particularly along Acorn Lane, there is a problem of inadequate parking space on private property. As a result, many residents regularly park on Town property. This problem should not be exacerbated by the granting of permits to expand or add structures on residential properties in a manner that further reduces space for parking on the affected property.

This Parking Policy is presented to guide actions by the Mayor and Council regarding parking of motor vehicles on public property. Implementation of this policy should be accomplished through regulations and requirements enacted in accordance with the Town Charter.

It is public policy that, where possible and practical, Town residents and guests will meet their primary parking needs by parking their vehicles on private property, and that all parking on public property will be in Public Parking Areas established by ordinance.

- (a) The criteria for establishing a Public Parking Area will include the safety of pedestrians and vehicles in the immediate vicinity, the number of dwellings and potential drivers residing in the immediate vicinity, the extent to which the parking requirements of the Zoning Ordinance can be met using private property, and existing conditions that limit vehicular accessibility to nearby residential property.
- (b) The greatest need for Public Parking Areas is within the RR-2 zone where the arrangement of public rights of way and smaller lot sizes have historically limited vehicular access to some properties; there is less need for Public Parking Areas within the other residential zones as lot sizes are generally sufficient to accommodate residential parking needs.

- (c) Public Parking Areas will be identified by posting of Town signs or by Council designation on a Public Parking Area map.
- (d) Public Parking Areas are to be located such that vehicles will not be parked so as to inhibit the safe flow of traffic.
- (e) Public Parking Areas must be prepared by application of Town-approved paving material, and such preparation is to be performed only by the Town or under the Town's direct control.
- (f) A motor vehicle with expired, revoked, cancelled or suspended registration may not be parked on any public property for more than 24 hours.
- (g) Parking a motor vehicle on public property continuously for more than 7 days will not be permitted, unless a waiver has been obtained from the Mayor based on good and sufficient reason, e.g. owner out of Town for an extended period.
- (h) Stopping of vehicles on public property is to be permitted to receive and discharge passengers or merchandise only.

Recommendations:

- **Review implementation of the Parking Policy; update Zoning Ordinance, Subdivision Regulations, and Building Permit Regulations to reinforce existing minimum parking requirements associated with the type of use in each zone including the number of parking spaces, the location of parking spaces, and the plan and design standards.**
- **Limit such building expansion and new construction on residential lots as would effectively eliminate parking on the affected property.**

3.4 Walkway/Bikeway Connection

~~The Shady Grove Sector Plan calls for a shared-use walkway/bikeway path connection between Amity Drive and the Town. Such a path will provide Town residents with improved walking and biking options for access to the Shady Grove Metro Station and nearby services. The ability to walk and bike safely within Washington Grove is a cherished town amenity. Unfortunately, there are significant impediments to such travel beyond the town limits. Since adoption of the 2009 Master Plan, several local developments have increased the need for improved access to Washington Grove.~~

~~Dedicated multiuse lanes have been built along the intercounty connector (ICC), to Lake Needwood and the Rock Creek trail system, and that circle the city of Rockville, which at its northern side parallels Gude Drive.~~

~~High density housing and retail development has or is being built along Crabbs Branch Way from Shady Grove Metro to Shady Grove Road. Included are a multiuse paved path along Crabbs Branch Way and Capital Bikeshares locations.~~

~~The Shady Grove Crossing development (formerly Piedmont Crossing) was completed, including its road system and separation from Ridge road.~~

The Comprehensive Montgomery County Master Bike Plan was completed. This plan calls for an off-road trail from Crabbs Branch Way to Amity Drive and Brown Street to be completed in the next few years. The July 2015 Shady Grove Sector Monitoring Report calls for “a shared use path along Crabbs Branch Way extended to Brown Street in the Town of Washington Grove.”¹

Formatted: Highlight

On the negative side, the completion of the ICC has effectively prevented north-south movement along several miles of its route. The barrier posed by I-370 and ICC prevents easy walking/biking movement to Shady Grove Metro Station, which is less than 2 miles from the town.

Recommendation:

- ~~● Support bike/pedestrian access from Washington Grove to the Shady Grove Metro Station. The Town should define the optimal location and coordinate with the County for a shared-use path in keeping with the history and character of the Town.~~
- Support safe and convenient bike/pedestrian access from Washington Grove to surrounding areas. The greatest priority is a connection to the Shady Grove Metro Station. The Town should coordinate with the County for a shared-use path to the Metro Station that minimizes travel time and is in keeping with the history and character of the Town without an increase in paved surfaces within the Town.

Formatted: Font: Not Bold

3.5 Railroad Corridor

(1) Commuter Trains -- Historically, the Town began with the railroad, linked to the expansion of the Baltimore and Ohio Railroad Company's Metropolitan Line to the northwest of Washington, D.C. The Town is served by a double set of tracks along its southerly border owned and operated by CSX Transportation, successor to the B&O. The 66' roadbed is on the National Register of Historic Places. The tracks are used by numerous daily freight trains and by Amtrak. Washington Grove is an sheltered stop for morning and evening MARC commuter trains operated for the Maryland Department of Transportation that provide daily transportation for Town residents and others commuting to Rockville, Garrett Park, Kensington, Silver Spring, or Union Station. Some parking spaces are available along the southernmost side of the railroad tracks, opposite the Town, between the tracks and Oakmont Avenue, and for a few cars on the north side of the tracks, along Railroad Street. Many Town residents walk to and from the commuter stop, as do residents from the Oakmont and Deer Park areas. Additional parking might encourage more riders to use the Washington Grove stop, and lessen concerns that the stop could be eliminated at some time in the future. The public property dedicated in 1881 as "Oakmont Park" and the adjacent public right of way used for access to parking behind Hershey's Restaurant could be explored with Montgomery County for expanded commuter parking and completing the development as a park. Delineation of a crosswalk on Railroad Street near Grove Road has increased pedestrian safety, but pedestrians are still at risk given Railroad Street traffic and limited sightline to the east.

The area of the station including views up and down the tracks, and across to Hershey's Restaurant and the houses of Oakmont are considered contributing elements to the Historic District because of their close association with the development of the Grove. Hershey's served at various times as a store and as the Post Office for the Town.

Formatted: normal, No bullets or numbering

Recommendations:

- Support the continuation and expansion of MARC commuter train service at the Washington Grove stop.
- Explore options for providing additional southside parking for MARC commuters using the Washington Grove stop.
- Explore additional measures to insure pedestrian safety for those crossing Railroad Street near Grove Road.
- As part of the Railroad Street improvement plan, work with MARC to improve the area of the stop with streetscape and landscape elements.
- Encourage Montgomery County to develop and maintain Oakmont Park as an amenity for the Oakmont and Washington Grove communities.
-

Formatted: Font: Not Bold

(2) **Other Transit Services and Easement** —~~While~~ Town residents currently enjoy walking access to the commuter train and seven bus stops for daily bus service provided by Montgomery County Ride-On. ~~¶~~The existing railroad corridor was studied to determine the need for a right of way along the southern side of the tracks for additional transit options as part of the 1990 Corridor Cities Transit Easement Study. The resulting document recommended further study of this alignment near Washington Grove for possible extension of Metrorail, as well as a possible light-rail (trolley) or dedicated busway. However, more recently, the Shady Grove Sector Plan adopted by the County Council in 2006 removes the 50foot transit easement on the west side of the CSX right-of-way, north of the Shady Grove Metro Station, within the Plan Area boundary. Instead, priority is given to building the Corridor Cities Transitway, a transit extension proceeding directly west from Shady Grove through the King Farm property north towards Clarksburg. This transit alignment is preferred because it would serve major developments that currently do not have any access to transit.

Any mass transit extension in the vicinity of Washington Grove would have impacts on the Town. The historic Humpback Bridge (see discussion below) is not likely wide enough to provide clearance for additional transit. Either the bridge would have to be closed or a new bridge would need to be built that would be higher and much longer which would have significant adverse impacts on the Town.

If Metrorail is chosen, then a transit stop at Washington Grove might not be practical. The noise of the frequent trains could be greatly lessened by undergrounding the system, as has been discussed to protect Olde Towne in Gaithersburg. If a trolley line or a busway is chosen, then a passenger stop at Washington Grove would be possible, though the impacts of increased traffic would have to be considered. Any of these transit options would negatively impact the historic view shed along the railroad tracks and the Grove's traditional connection to the rail line.

Recommendations:

- **Support the County Council's decision to eliminate the transit easement on the southerly side of the railroad corridor.**

Formatted: Highlight

- **Support the building of the Corridor Cities Transitway as the preferred means to provide transit beyond the Shady Grove Metro station.**
- **Oppose using heavy rail for any new extension of mass transit along the railroad corridor near Town, unless the system is completely enclosed below ground.**

3.6 Washington Grove Lane

In response in large part to Washington Grove concerns, old State Highway MD124 has now been relocated away from Washington Grove. While the stretch of the highway now named Washington Grove Lane was transferred from the State to the County in 1998, truck traffic, speeding, and pedestrian safety at the Maple Lake pedestrian crossing on the 0.57mile stretch through the Town continue to be of concern.

The Town previously sought to have this stretch of road transferred from the State to the Town. The Town's 1975 Master Plan called for this section of road to revert to Town control and that it be discontinued as a through street, to serve as a residential road only. In March 1993, a Special Town Meeting voted to accept jurisdictional responsibility for the road, including maintenance. In 1998 the State was ready to pursue transfer of ownership but chose to transfer the road to the County as part of a compromise with Washington Grove, Montgomery County and Gaithersburg. A negotiated formal agreement provided land swaps between Gaithersburg and Montgomery County and the State to relocate MD124 away from Washington Grove. In addition, the agreement responded to Gaithersburg's concern by providing that Washington Grove Lane cannot be permanently closed unless all ~~three-four~~ signatories the County, State, and Gaithersburg, and Washington Grove - agree to it.

To address Washington Grove concerns regarding speeding, the agreement also specified that speed humps would be installed. Subsequently, seven speed humps were installed. The speed humps had the desired effect of significantly lowering speeds. Traffic volume was also significantly reduced. However, an unexpected consequence on some nearby homes of one of the humps was increased noise and vibration due to braking, accelerating and trucks going over the humps. As a result, that hump was removed.

With the re-routing of MD124, Washington Grove Lane qualified as a County "traffic calming" project. To respond to concerns regarding truck traffic, the road has been posted for a 7,000-lb gross vehicle weight restriction; enforcement, however, remains a problem. Other efforts are underway to reinforce a driver's perception and understanding that Washington Grove Lane is a residential road in a special place.

Recommendations:

- **Continue efforts to improve speed and weight limit enforcement on Washington Grove Lane; seek ways to improve the safety of the pedestrian crossing and explore additional traffic-calming options that would not hamper fire and safety vehicles.**

- Seek improvements to the intersection of East Diamond Avenue, Railroad Street and Washington Grove Lane to improve pedestrian safety and the aesthetics as an appropriate entrance to the historic Town of Washington Grove while ensuring low speeds.
- ~~U~~**As part of the Washington Grove Lane improvement plan undertake improved signage and landscaping on Washington Grove Lane to distinguish it as a residential road that runs through a National Register Historic District.**
- Continue to pursue transfer of Washington Grove Lane to the Town.
- Keep Oak and Center Streets closed at Washington Grove Lane to reduce cut-through traffic.
- Seek improved enforcement of current prohibition of southbound “NO LEFT TURN” onto McCauley Street and “NO RIGHT TURN” onto northbound Washington Grove Lane to reduce cut through traffic. Explore alterations to the intersection of McCauley Street and Washington Grove Lane to make illegal turns more difficult.

3.7 Humpback Bridge/Railroad Street – The present alignment of Railroad Street extending from the bridge to the southeast to Aitcheson Crossing and Oakmont Avenue became a public way by usage through the early 1900s. The B & O Railroad reconstructed the bridge about 1946, replacing a deteriorating timber structure with a new timber structure that replicated the earlier bridge design.

In April 1961, a Master Plan for the vicinity of Gaithersburg was adopted by M-NCPPC that showed a new road through the area now occupied by Girard Place and Gaithersburg Ford Tractor, crossing over the then existing alignment of Route 124 (East Diamond Avenue) with the bridge over the B & O tracks and tying into Oakmont Avenue in lieu of East Deer Park Drive.

The Town’s 1975 Master Plan incorporated this location for the County’s planned bridge replacement location but did so to preclude the direct connection of Railroad Street to Crabbs Branch Way. The plan noted that such a connection would stimulate increased traffic flow and that the bridge as planned would have a deleterious environmental impact.

Around 1977, a study prepared for the Gaithersburg Planning Department proposed construction of the new bridge at Girard Street. This concept was the subject of a public hearing by Gaithersburg in January 1985, and was supported by Town testimony.

Subsequent to the January 1985 Public Hearing in Gaithersburg, the County Planning Board asked the County DOT to prepare various studies of the alternatives to accommodate flow in this traffic corridor, including the Girard Street Option with variations, the Master Plan Option with variations, and the Railroad Street to Crabbs Branch Way Option. The Town asked that a “No Build” Option with variations also be evaluated.

The bridge alignment in the 1961 Gaithersburg Vicinity Master Plan would have created a new four-lane bridge crossing the tracks at a skew, much longer and approximately 6 feet higher than the existing bridge, highly visible and projecting traffic noise farther into the Town than at present, and “impose(d) a serious nuisance on Grove residents through loss of direct access to the south”

(as stated in the Town's 1975 Master Plan) by requiring that all vehicular access to the Grove be by way of Washington Grove Lane.

The Girard Street Bridge Alignment would have moved most traffic to the west side of the railroad. The connection of existing Railroad Street to Crabbs Branch Way would still be a possibility to be faced. While the proposal would have had no significant visual impacts on the Town, it shared with the prior plans the requirement that all vehicular access to the Grove be by way of Washington Grove Lane.

The Railroad Street to Crabbs Branch Way connections would have opened a major traffic route paralleling Route 355 between Gude Drive and downtown Gaithersburg intensifying traffic on Railroad Street and Washington Grove Lane (then MD124).

~~The Town, at the time, supported the Girard Street option as having the least impact on the Town while Gaithersburg decided to oppose this option although this had originally been proposed by the City of Gaithersburg planning staff. The County dropped continued consideration of new bridge options and continued to maintain the existing humpback bridge.~~

~~In 2004, the County's Department of Public Works and Transportation (DPWT) once again brought up the issue of replacing the bridge with multi-lane alternatives, all of which, if built as proposed, would have deleterious impacts on the Town and neighboring residential communities and no significant transportation benefit. The Girard Street option was not included, given Gaithersburg's concerns. The Town asked that retaining the existing bridge should be included as an option since it was consistent in size, scale and aesthetic with the historic character of the Town as well as with neighboring communities.~~

On July 9, 2005, the Washington Grove Town Council adopted a resolution opposing the three bridge replacement concepts proposed by DPWT and supporting rehabilitation and preservation of the existing humpback bridge. Among the negative impacts on the Town cited in the resolution of the DPWT proposals were:

- additional traffic, safety concerns, pollution, and noise at unacceptable levels that would be magnified by increasing the height of the bridge;
- the elimination of "forested areas on both sides of the tracks including cherished old Oak trees that contribute to the rural views from Washington Grove's historic walkways";
- the taking of Town land dedicated to public use and adversely impacting internal Town pedestrian and auto circulation patterns

The Town subsequently hired a bridge engineer, who is nationally recognized for historic preservation, to study the bridge. In a July 12, 2005 letter, the engineer stated, "My conclusion is that the bridge is in good condition structurally, and can be preserved for decades to come with the appropriate maintenance and rehabilitation." Subsequently, the bridge was nominated for the Master Plan for Historic Preservation in Montgomery County. The Montgomery County Historic Preservation Commission recommended the bridge for the Master Plan. On July 14,

2005, the Montgomery County Planning Board placed the bridge on the County's Locational Atlas and Index of Historic Sites.

The bridge was accepted by the State as being eligible for listing on the National Register of Historic Places and the Maryland Inventory of Historic Properties.

Part of the justification for consideration of four-lane bridge replacement options by DPWT was that Oakmont Avenue was identified in existing Master Plans as a four-lane road. This designation assumed connecting Oakmont Avenue to a four-lane Girard Street. However, since the earlier County Master Plans were written, significant changes have taken place on area roads. Gaithersburg has placed a traffic circle on Girard Street to reduce traffic to 15 miles per hour and does not support its connection to Oakmont Avenue. Route 124 has been re-located and Washington Grove Lane is now a residential road with speed humps. Given these changes, expansion of Oakmont Avenue to four lanes with a multi-lane bridge would be clearly incompatible with the surrounding road system and residential communities.

With the completed annexation of the Cator/Harrison property, more of Railroad Street is now within the Town's corporate limits, including the portion of Railroad Street fronting the ~~I-4~~ Employment Office (EOF) zoned properties in the County known as Roberts Oxygen and the adjacent storage yard. ~~The County authorized driveway access for both these properties via Railroad Street expires once access is available via Amity Drive/Crabbs Branch Way.~~

Recommendations:

- Continue Town opposition to any connection of Railroad Street to Crabbs Branch Way due to the negative impacts of the high volume traffic flow that would result on Railroad Street and Washington Grove Lane, as well as the potential for additional cutthrough traffic through the Town.
- Continue to support proposed access of the ~~I-4~~ EOF zoned property (known as Roberts Oxygen) to Crabbs Branch Way, and seek long-term closing of that property's access to Railroad Street as called for in the Shady Grove Sector Plan, to help reduce industrial traffic crossing the CSX at-grade crossing on Railroad Street or traveling on Railroad Street through the Town.
- ~~Monitor possible creation of a two-lane industrial street bridging over the CSX tracks north of I-370, connecting Crabbs Branch Way to Oakmont Avenue to provide local access for industrially-zoned properties, if the vacant Casey properties 6 and/or 7 are developed with relocated County services.~~
- Seek to have the County reclassify Oakmont Avenue as a two-lane road in keeping with the residential communities on both sides of the tracks and the goal to minimize through traffic on these local, residential roads.
- Support improved maintenance and preservation of the existing single-lane historic humpback bridge, as well as the improved maintenance of the at-grade crossing.
- Seek full historic preservation designation of the existing historic humpback bridge at the county, state and federal levels.
- Continue opposition to planning and construction of a new multi-lane bridge from Oakmont Avenue or East Deer Park Drive across the CSX Railroad tracks.

Formatted: Highlight

- Maintain closure of Brown Street at Hickory Road to reduce cut-through traffic.
- ~~Consider the possible relocation of Railroad Street from the bend just east of Grove Road to continue it contiguously with the railroad right-of-way to Aitchison Crossing, abandoning the short section through Morgan Park, and retaining most of the existing road as local access to Block 25.~~
- As part of the Railroad Street Improvement Plan seek improved signage and other improvements on Railroad Street to slow traffic approaching the Railroad Street/Grove Road intersection to enhance the safety of pedestrians and vehicles.

3.8 Ridge Road

Prior to 1992, the southern portion of Ridge Road delineated the eastern boundary of the Town. With annexation of the 1.58acre Washington Suburban Sanitary Commission property (Parcel 360), the 2.88acre Ward property (Parcel 635), the 0.95-acre Moyer-Gussack property (Parcel 291), the 0.42-acre Pammel property (Parcel 660), and the 13.55 acres of the Voigt Properties and Washington Grove Hills, the corporate limits have moved eastward. Ridge Road is a narrow residential lane within the Town corporate limits.

As part of the Shady Grove Crossing development process the 10.3 acre meadow bordering upper Ridge Road was designated a Legacy Open Space Meadow and an easement given to MNCPPC to administer the area as a County Park. The Town subsequently purchased the underlying fee to the land so we would have an ownership stake in determining what happens on this important Town buffer area. The Town and the Montgomery County Parks Department have a detailed mutually agreed upon, Operation and Use Plan. The Parks Department provides ongoing maintenance of the area. See the complete description of the meadow parcel and process by which it was purchased in Section 2.2.

The ~~Piedmont Shady Grove~~ Crossing development that borders lower Ridge Road ~~could have~~ has had a dramatic impact on the rustic rural character of the road. A landscaped buffer was included in the development requirements in order to buffer the impacts on the character of the road. In addition, the houses in the new development were required to face those in the Grove in order to provide a more friendly relationship. All consideration should be sought from County planners and developers to protect the character of the road and the residential ambience within the Town of Washington Grove.

Recommendations:

- ~~Oppose any vehicular access to Ridge Road from the Piedmont Crossing development, including emergency or restricted access. Oppose use of Ridge Road by construction vehicles used for development of the property outside of Town boundaries.~~
- Preserve the character of Ridge Road as a country road along its entire length.
- ~~Define and protect the strip of wooded land owned by the Town on the southern side of the eastern portion of Ridge Road. (done)~~
- Maintain the Meadow as an open field as defined by the Conservation Meadow Park Operation and Use Plan.

Formatted: Font: Not Bold

3.9 McCauley Street and Maple Road

The Town holds title to a 50-foot strip of land along the northern side of McCauley Street in order to accommodate public improvements and any future widening of that street. The Town also holds title to a 25-foot strip of land along the eastern edge of most of Maple Road to accommodate possible public improvements and as surety in maintaining open space on the narrow roadway by restricting construction. ~~Adoption of Town width standards can assist with evaluation of road and right-of-way requirements for McCauley Street and Maple Road. These standards also can provide some measure of consistency for any new road construction, and for decisions on maintenance and or transfer of existing Town-owned parcels. Transfer of surplus parcels will reduce areas of Town maintenance and direct responsibility.~~

Recommendations:

- ~~• All new road construction should be based on a standard right-of-way total width of 30 feet to accommodate traffic needs and public improvements. Standard paved roadways should have a 20-foot asphalt base width with 16-foot drivable surface and 2-foot shoulders on either side of the drivable surface. The shoulder should not encourage driving but allow parking; a tar and chip shoulder or other heavy textured surface should be used to avoid displacement by vehicles and runoff.~~
- ~~• The drivable surface should consist of a 6-inch bituminous concrete (asphalt); the shoulders of a 4-inch asphalt base course and 2 inches of tar and chip.~~
- ~~• Reduce Town ownership of existing strips along Town roads within developed areas of the Town for a right-of-way maximum width of 50 feet. This accommodates possible public improvements and maintains open space.~~
- ~~• Prepare updated listings of all Town-owned parcels, rights of way, easements, and abandoned alleys. Review and evaluate data using the above standards. The Town policy to sell parcels, when found to be surplus, to the contiguous property owner(s) should be encouraged wherever it is determined that there is no potential for Town need. Evaluation of requirements for rights-of-way should take into account parking needs and other possible public improvements, including under grounding of utilities.~~

Formatted: Tab stops: Not at 0.5"

Formatted: No bullets or numbering

3.10 Center Street

At issue for this discussion is the possible opening of the portion of Center Street between Grove Road and Maple Avenue for emergency vehicle access. While opening this street would save approximately 12 minutes transit time, the possible negative consequences should be considered, if vehicular access is not restricted to emergency vehicles. Among the most obvious are the maintenance area and its environs, which will become more susceptible to trash and waste dumping, thus compromising the ecological balance of the entire woodland area.

Recommendation:

- Continue restriction of vehicular access on Center Street between Maple Avenue and the Maintenance area.

3.11 Cherry Avenue

In 1976, special permission was given to four homeowners of Lots 16 of Block 31 to use the center 10 feet of width of Cherry Avenue between Brown Street and its coincidence with the intersection of Lots 6 and 7 of Block 31 for reasonable vehicular access to their properties. The 1976 resolution provided that this permission shall be progressively withdrawn from each successive lot owner beginning at Lot 6, Block 31, as said lot owner gives consent to such withdrawal or as each of the four properties is sold. This permission now only applies to one residence, 108 Ridge Road. Despite the limitations on vehicular access, there have been occasional eruptions in controversy caused by vehicular use of Cherry Avenue contrary to the 1976 resolution. Recent Town action has included reminding residents of the area and eliminating trash trucks on Cherry Avenue.

Recommendation:

- **As vehicular use of Cherry Avenue ceases, as provided in the 1976 Town Council resolution, Town maintenance staff should work with the Forestry and Beautification Committee to restore that portion to conform with other walkways in Town.**

3.12 Brown Street

The western end of Brown Street at Hickory Road is closed to regular vehicular traffic by a locked gate. This has dramatically reduced cut-through traffic speeding along narrow roads of the Town.

Recommendation:

- **Continue restriction of vehicular access at the western end of Brown Street.**

~~3.13 I-370/InterCounty Connector (ICC) (Delete section---no longer relevant)~~

~~The ICC has quite a long history. First conceived as a freeway along part of the path of a planned "Outer Beltway," many of the individual purposes and needs for the facility have changed over the years. In 1983, a draft environmental document for the ICC between I270 and Gladys Spellman Parkway was approved by Maryland State and Federal Highway Administrations. However, as the sensitivity of the environment became an increasing concern in the late 1980's, the impacts of the ICC as planned were determined to be excessive. While the ICC was not built as planned, the process did yield the construction of I370, which connects I270 to the Shady Grove Metro Station.~~

~~In recent years, plans for the ICC were resurrected and the first design/build ICC phase is underway to construct a toll road from I-370 on around to an intersection with Georgia Avenue. This road construction includes connection loops (closer to Washington Grove than I370) to connect the ICC with the current Metro access portion of I370. When the Town earlier protested~~

~~construction of I370 and its impacts on the Town, an Historic District on the National and State registers, the State Highway Administration (SHA) responded in 1982 with:~~

~~“Since Washington Grove is further removed from I370 than the sites then analyzed, it is obvious there will be no degradation of the existing air and noise environment of Washington Grove.”~~

~~Listening to the increased day and nighttime noise that has resulted from I370 traffic, Town residents must question this assessment by SHA officials. The inaccuracy of SHA's 1982 response raised doubts that the most recent ICC study will adequately address Town concerns as does the contractor's report that the State points to in declining to install noise abatement structures. It is clear that the ICC toll road will exacerbate the negative impacts of I370, and further degrade the Town's ambient environment with diesel fumes and noise from increased truck traffic near the Town.~~

~~The most recent round of studies included a determination, known as a Section 106 Report, of the impacts of the proposed road on Washington Grove as a historic resource. This was undertaken as a part of the Environmental Impact Statement. The State contractor's report purported to examine whether, according to the National Historic Preservation Act, there would be “introduction of visual, audible, or atmospheric elements that are out of character with the property or alter its setting.” Initial Historic and Noise Technical Reports were prepared that found there to be “no impact” on Washington Grove. The State Highway Administration, Federal Highway Administration, and Maryland Historic Trust (as the State Historic Preservation Officer) concurred in the determination of “no impact” and thus no mitigation was included in the Memorandum of Understanding required for impacts on historic resources. The Town has vigorously challenged this determination. It has presented evidence to and held meetings with representatives of the regulating authorities in order to demonstrate the bases of its objections.~~

~~During the recent process, the Town asserted that Federal historic preservation statutes require noise mitigation for any adverse impacts associated with the project. SHA responded that modeled impacts will not exceed allowable thresholds for noise increase, and that the Town's historic district status therefore does not require mitigation measures. SHA also emphasized that the recently approved alternate for Loops A and C (connecting ICC traffic with the Metro Access Road) will reduce impacts on the Town as Loops A and C will pass underneath the ICC. The modeled reduction in noise impact on the Town would be less than 1 decibel, and therefore must be labeled as a “negligible” reduction. These loops will be about 20 feet below adjacent ground level with reduced visual impacts, less impact on wetlands, less removal of existing trees, and additional space for landscaped buffering and reforestation.~~

~~The Town also pushed for evaluation of road surface treatments to reduce traffic noise, e.g. textured or porous asphalt. The ICC contractors and SHA responded that contract specifications preclude evaluation of such surface alternatives, requiring use of standard asphalt or concrete to achieve a minimum 25-year pavement life. SHA reported that nearby portions of I-370 (now concrete) will be repaved with asphalt to reduce traffic noise.~~

~~Based on the experience with SHA's projection of noise from I-370, the Town has requested that SHA develop a quality assurance program based on real measurements to confirm model accuracy, evaluate cumulative impacts including longterm health of replanted trees, particulate emissions, as well as noise levels, and then prompt further mitigation and/or traffic management if standards are not met. The initial response from SHA reps was that 2030 is the design year and therefore model confirmation must await 2030. This response is unacceptable to the Town representatives. The Town will work with neighboring communities and our elected representatives to get this situation corrected and ensure the necessary oversight during this design/build process to protect existing communities all across the ICC project area.~~

Recommendations:

- ~~● Corrective noise abatement structures should be built along the present course of I-370 and along the nearest portions of the ICC to protect existing communities.~~
- ~~● Continue to press for development of a quality assurance program to validate noise and air pollution modeling and prompt corrective mitigation.~~
- ~~● Inform and encourage elected State and County representatives to help protect existing communities all across the ICC project area.~~
- ~~● New expenditures for transportation should encourage the use of public transportation.~~

3.12 Historical concerns: The elements identified in the National Register as contributing to the historic integrity of the Historic District include:

1. The radial layout of the original tent district
2. The orthogonal layout of gravel walkways alternating with vehicular roads for the cottage district
3. The streetscape created by the walkways and relation of the cottages to the walkways
4. Contributing viewsheds have been defined for Railroad Street and the the station, Ridge Road, the commercial corner and Washington Grove Lane.

Concerns for historic features which lie within the transportation ways above and are identified by the Town's forthcoming National Register update shall receive consideration in planning and treatment.

4. COMMUNITY FACILITIES

The Town facilities include both buildings and systems.

The systems include the Pepco electrical system, the Verizon telephone system, the Comcast cable system, the WSSC water and sewer systems, the storm water management facilities, and the street and walkway lights and signs. The Town manages the storm water and street sign systems.

Formatted: Normal

The Town makes heavy use of its several existing facilities: McCathran Hall and its Historic Archives Room, the Town Garage, the Gazebo and the Recreation shed, all of which the Town operates and maintains. Over the years, these facilities have provided residents and guests with a wide and enriching range of changing activities and services. In the future, three overarching considerations should guide the Town with regard to its existing facilities and any additional it may construct:

- I. The use and maintenance of Town facilities should include an annual review by a standing committee to ensure the safety, viability and usability of these spaces.
- II. Energy consumption and conservation is of growing concern. Use of Town facilities should be governed by an informed evaluation of current or planned energy consumption and effective conservation methods appropriate for the circumstances.

III. Reflect the Grove's historic character in any changes to Town facilities. Implementation of the recommendations of this document should always weigh the aesthetics take into consideration the historic integrity of each facility as an important part of such actions.

III-IV. New facilities or modifications thereto should reflect the scale and materials of, or be compatible with, the neighborhood and surrounding structures.

Formatted: Normal

4.1 McCathran Hall -- McCathran Hall, constructed in 1901, renovated in 1997 with an addition, is composed of the main hall, the lower hall, the Council room and Archives room. The renovation and addition were supported by a grant from the Maryland Historic Trust which holds a historic easement on the building's exterior. As the oldest remaining public structure in Town, the Hall serves as a multi-purpose center of the community~~the one with unique historical values, tops the list of historically contributing structures and, is~~ the one closest to the heart of the ~~community~~Town, McCathran Hall and will be treasured into the foreseeable future.

Recommendations:

- Continue to support the special needs of McCathran Hall under the direction of the designated Council member.
- Annually inspect settling effects related to the new addition to determine when corrective/preventive measures should be taken.
- Devise and enact a drainage plan for the building that will solve existing problems in the furnace room area.
- Consult with HPC for modifications to the Hall that impact the historic integrity of the structure or its environs.

Formatted: Font: Not Bold

Formatted: Normal

Electrical Systems -- The Town has completed a modification to the Hall's electrical service to meet current demands. There are existing short-comings that include lights dimming when the air conditioning starts in the lower hall. These are under investigation related to lower hall air conditioning operations.

Recommendation:

- **Determine and complete electrical modifications to correct existing light dimmings.**

Air Conditioning -- As part of the 1997 addition, the Lower Hall and new Council and Archive Rooms were air-conditioned. Air conditioning the main Hall is a topic of very differing points of view among its users. Air conditioning has cost, comfort, and possible exterior and interior visual implications that should be explored in detail.

Recommendation:

- **Thoroughly study the full range of issues, including an energy audit associated with air conditioning the main hall, and present all the findings at a special Town meeting.**
- **Investigate the environmental standards for archive preservation in the archive room.**

Lighting -- Existing lighting in the Hall is relatively stationary and basic in its function and availability. A lighting plan for the main Hall has been implemented. This includes modifications for specific events from general lighting to specialized capabilities such as spot and flood. Remote control of individual lights - an emerging and, at present, costly advancement - has advantages for control of lighting in the main Hall with its extremely high ceilings. Advances in the quality and availability of assorted low-energy bulbs have expanded the possibilities for desirable illumination at more efficient energy consumption levels.

~~Outside light in late afternoon and during evening productions can be intrusive to the events within the main Hall. Effective window blinds for the main Hall that are appropriate to the style of McCathran Hall, easy to operate, and low in maintenance have been installed.~~

Recommendations:

- **Conduct ongoing review and conversion, as identified through the energy audit and as economically feasible, of light bulbs throughout McCathran Hall to take advantage of energy-efficient advancements.**
- **Maintain the historic color temperature of the bulbs to be similar to the original incandescent lights – 2700 K.**

Insulation -- Presently, the Main Hall is above unheated crawl space. There is no floor or ceiling insulation. A resistance rating of R-25 for crawl spaces and of R-38 for attics is a minimum level that should be considered. If installed, special care will need to be focused on electrical and fire suppressant systems that now exist within these areas.

Recommendation:

Underline : Indicates matter added to previous Master Plan.

Page 44

DRAFT Dated 2017-12-18

~~Strikethrough~~ : Indicates matter deleted from previous Master Plan.

Formatted: Font: Not Bold

Formatted: Normal

- Guided by the energy audit and given energy and operating cost implications, consider installing industry recommended R-rated insulation to meet actual and anticipated use as soon as this can be budgeted.

~~Aesthetics-Historic Integrity~~ – The Hall is an octagonal shingle style structure with a peaked roof and six-over-six double sash windows built in 1901 as a Methodist Assembly Hall to replace the Tabernacle. --From the exterior, the Hall is unique in its appearance and any modifications deserves special attention ~~to aesthetics~~ associated with it and the environs and requires consultation with the Maryland Historic Trust.

Formatted: Normal

Landscaping - Landscaping efforts to date have been aimed at enhancing those qualities, making it more attractive within its setting and for adjacent residences. The popular SummerInTheParks program for Town children makes heavy use of the Hall grounds. The entrance and walkway tile paving has held up and continues to make access to entrances of the whole building more comfortable in all weather. ~~An unsightly electric pole sits at the corner of the main entrance and, since the death of two large oaks on either side of the Hall, has become especially noticeable.~~

Recommendations:

- Explore underground wiring for McCathran Hall.
- ~~Work with Pepeo to either remove or relocate the offending pole.~~
- Investigate replacing some of the heavily used grassy areas on the grounds with lower maintenance mulch to accommodate play activities, to reduce earth compaction over tree roots and to reduce mowing and water needs.

Formatted: Font: Not Bold

4.2 Town Maintenance Shop -- ~~The original building was constructed in 1955.~~ An addition to the garage in 1999 provided sufficient work and storage space for Town maintenance activities. Storage of waste pick-up, etc. is held outside for regular removal, but can be unsightly to walkers along this wooded section of Center Street and can harbor insects such as mosquitoes and rodents during the interim. The flourishing but sometimes rampant bamboo forest provides a good screen of the Maintenance Shop and is a favorite spooky trail for younger kids in Town.

Bathrooms with exterior access on the playground side of the Maintenance Shop are important to kids waiting for the morning bus as well as to the assorted users of all the playground areas, including casual walkers. Vandalism has been enough of a problem over the years to necessitate combination locks for a good portion of the time.

Recommendations:

- Establish screening of the trash storage area to create a visual block from Center Street and investigate enclosed storage that allows easy transfer of waste materials, both in and out.
- Institute a regular bamboo containment schedule that will control spread beyond a range intended to shield the garage and immediate environs.
- Increase lighting in and annually paint and generally improve the interior appearance of the restrooms.

4.3 Gazebo -- The Town Gazebo, built originally by volunteers in 1974 and heavily used for organized and informal events, is an open structure that is ~~located~~ the focus of Zoe Wadsworth Park between the east woods and a quiet residential portion of Grove Road. Periodically, the gazebo undergoes a wave of vandalism that requires significant repairs. The issue of security lighting has been proposed as one possible means of control.

Recommendation:

- **Monitor use of Town Gazebo and evaluate opportunities to discourage vandalism there.**

4.4 Recreation Shed -- Designed and built by Town volunteers (date??), the two-part recreation shed has had active use for equipment by the many tennis groups in Town, while the second side is largely an “away” space for odds and ends. Shed maintenance requires periodic exterior cleaning and eventual attention for the ramp to the door on the tennis side.

4.5 Street and Walkway Lighting -- ~~For decades, the soft lighting along Town walkways has been provided by incandescent bulbs. Despite periodic urging by Pepco to convert to less expensive, more intense kinds of light such as sodium or mercury vapor, the Town has held fast and willingly paid the cost of lighting that accommodates the aesthetics of the Town Within a Forest.~~

~~Recent technological advances, however, in modifying kinds and amounts of light continue to work toward providing light sources that could compliment the aesthetics along the walkways of the Town. (This section is being combined with the section from Transportation)~~

The Town has about 100 streetlights along its roads and walkways. For decades, the soft lighting had been provided by incandescent bulbs. Most now have induction bulbs that replicate the original incandescent light quality, although a few mercury (blue) and sodium (orange) vapor fixtures have been installed. Despite periodic urging by Pepco to convert to less expensive, more intense kinds of light such as sodium or mercury vapor, the Town has held fast and willingly paid the cost of lighting that accommodates the historic character of the Town Within a Forest. The cost for electricity and maintenance of Town streetlights is significant and growing. A proactive solution by the Town can be beneficial, for cost and for energy conservation.

Recent technological advances, however, in modifying kinds and amounts of light continue to work toward providing light sources that could retain the historic character along the walkways of the Town.

While developing a modernized, more efficient lighting system, consideration should be given to light trespass and light pollution. Light trespass refers to glaring light that crosses property boundaries and causes an annoyance by reducing others’ ability to see clearly or by shining in others’ windows. Excessive spill-over light or over illumination obliterates the beauty of the night skies, wastes energy, can be an annoyance to neighbors, and actually can reduce security because bright, glaring light at night creates dark shadow where criminals can hide and prevents the eye from properly adapting to darker areas.

The Town sometimes suffers from power outages, particularly from storm damage with tree limbs knocking down power lines.

Recommendations:

- ~~● Under direction of a lighting expert, select a section of walkway and replace existing incandescent bulbs with more efficient bulbs that provide aesthetically pleasing results. In the event of two or more possible replacement types of bulbs, this study of walkway lighting might include a second walkway section for comparison.~~
- ~~● As a Town, determine after a full year study, whether or not to continue with such walkway lighting conversion throughout the Town, or return the trial area(s) to incandescent lighting.~~
- Develop a plan for putting all wiring underground so whenever repairs or significant work is done in Town, wiring will be moved underground. As part of this plan, all new development and new construction of buildings should incorporate underground placement of utilities to service such structures. Part of this conversion plan needs to identify locations for all light poles, so as utilities go underground and utility poles are removed, new lighting can be installed without loss of coverage.
- Explore sources of funds to assist with placing existing wiring underground (e.g. a Federal energy assistance grant)
- Develop a plan to replace the existing streetlights and walkway lighting system with a more efficient system that also preserves safety and is in keeping with the historic aspect of the Town, yet minimizes glare, light trespass, and light pollution. The plan should consider differentiating lighting for roads, walkways and recreational facilities, (e.g. use of foot-level lighting along sections of the Town walkways, rather than pole lighting). Lighting should be chosen to illuminate only the target area using only the amount of light needed.

Any modifications to the lighting should consider the historic pattern reflected in the scale, placement and character of the existing lights.

4.6 Avenue, Street and Road Name Signage – Soon after the Town’s incorporation in 1937, it set about modernizing, including installing a system of wooden street signs made by town residents. At each street and avenue intersection four brown-painted board signs mounted to a 4” x 4” post. The street or avenue name was painted in white block high letters using a stencil. As these signs deteriorated, they were replicated with few changes until the 1980’s. In 1986, the Town decided to hire Town resident and maintenance supervisor Jim Fletcher, among other things an artist, to take over the sign production. Jim integrated painted sketches of native species to the signs and experimented with increasing the visibility of the lettering. Washington Grove is the only historic district in Montgomery County to have historic street signs and probably the only historic district in Maryland to have historic wood street signs. Once the maintenance supervisor could no longer reproduce the historic signs, town resident Susan Van Nostrand volunteered to organize a group to rehabilitate or replicate the wood signs with reflective lettering. These signs follow the original parameters of size, surface, lettering style, and configuration and are considered contributing elements to the National Register Historic District.

Recommendations:

- Document the approved restoration process and develop a long term maintenance plan for volunteers to follow into the future,

4.67 Incidental Structures

Athletic Club Fireplace -- Planned and built in 1935 by the then Teen Athletic Club of Washington Grove, the fireplace which formerly was often used for cook-outs has fallen into some disrepair: its lintel with names and date of the founders is mostly gone, the exterior stones have some mortar decay, and the cooking area and grate have missing and degenerated fire brick, mortar and stones. Recent picnics have relied mostly on individual grills brought to a specific event. The fireplace continues, however, to have limited use and a real visual impact on Woodward Park. The previous Master Plan suggested locating a fire circle in the park for similar events.

Recommendations:

- Acknowledge the historic artifact qualities of the Fireplace.
- ~~Renovate the exterior of the structure and redesign and renovate~~ Solicit professional recommendations for the restoration and renovation of the cook area for practical use.
- Establish a fire circle as an adjunct to certain Town events and as an active area for group and community gatherings: sing-alongs, story hours, marshmallow roasts, general camaraderie.

Landscape Storm Water Structures—There are several distinctive landscape structures built as part of the extended efforts to control standing and storm water in the Grove. One is a low stone wall along Grove Road that marks the drainage from the Circle. Another is at the intersection of Grove and McCauley.

Recommendations:

- Maintain the structural and historic integrity of the existing structures

Granite Pediment Sculpture – The 3 stone pieces in Woodward Park next to the bamboo were a donation to the Grove upon completion of the restoration of Daniel Burnham’s 1914 City Post Office next to Union Station. They were removed from the NE corner window when a direct bridge was built between the station and the post office.

4.8. Historical concerns. The elements identified in the National Register as contributing to the historic integrity of the Historic District include:

1. McCathran Hall
2. The Town Garage
3. The handmade wooden street and walkway signs
4. The traditional ambiance created by the street and walkway lights
5. The various handmade landscape features such as the fireplace, gazebo, recreation shed, stone stormwater features, and stone wells.

Community facilities which are identified as historic features by the Town's forthcoming National Register update shall receive special consideration in planning and treatment.

5. ~~RECREATION AND PARKS~~ AND FOREST PRESERVE

Washington Grove has a long standing interest in recreation and has sponsored many activities in Town parks and public areas since the earliest Camp Meeting days. ~~Several Town parks, the East and West Forest Preserves, and spring-fed, man-made Maple Lake~~ provide space and openness that enhance the quality of life within the Grove. Town parks also provide an opportunity for spontaneous activity by children and adults, perhaps a "pick-up" game, in contrast to the regulated pace that is characteristic of the work and school day.

Town parks are intended to provide active ~~and passive~~ recreation areas and are located in several locations within the Town boundaries. Active recreation refers to outdoor recreational activities such as organized sports and playground activities which require extensive facilities or development and which can have considerable environmental impact on the recreational site.

~~Passive recreation by Town residents ranges from star gazing on a bench in Wade Park to acidic comments while draped over the tennis court fence.~~ Active recreation can be accomplished on an individual basis with one or more players (golf practice, shooting hoops, use of children's play equipment, croquet, tennis) or on a team basis with several members composing each team. In general, team play requires much larger areas and has a potential for ancillary needs, such as parking and spectator spaces. Typically, both individual and team players want to practice to improve their skills and use Town facilities for that purpose.

Because most of Town parks are ~~im~~bedded within the residential areas of the Town, adjacent households have the advantage of immediate access for their recreation, and are front row spectators for all activities related to park use. ~~Users of the parks have a responsibility to the Town to safeguard the condition of the parks and to abide by Town regulations concerning such things as parking, trash, and hours of use.~~ Users of the parks ~~also~~ have a responsibility to adjacent households to minimize any peripheral effects of the users' activities. These include, but are not limited to, physical damage to property, excessive noise, and inappropriate behavior. This is reflected in the Town regulations for use of public spaces.

The Forest Preserve provides unique opportunities for passive recreation by Town residents. Outdoor passive recreational activities include walking, hiking, bird watching and other nature observation which require a minimum of development and which have a minimal environmental impact.

It is the responsibility of users of the parks, lakes, and Forest Preserve to safeguard the conditions of these public areas and to abide by Town regulations concerning such things as parking, trash, and hours of use. The Town has a ~~Carry In-Carry Out~~ Trash-Free Policy for all Town property.

It is the responsibility of the Town to maintain the park areas and Lake in good condition for ~~a variety of their intended~~ uses, both for current residents and guests and for future generations of Grovers and their friends. The popularity of certain sports, games, or activities will wax and wane with succeeding generations and town regulations should provide flexibility for these

changes. The Town is also responsible for maintaining the Forest Preserve for its habitat value to include restoration of degraded areas and protection of the forest ecosystem. The next section 6.0 describes the Forest Preserve in more detail.

Recommendations:

- ~~Establish a~~ As a part of the Town Safety Plan, annually review playground equipment for safety issues and address any concerns, after evaluation of Town facilities in cooperation with municipal insurance commission. Any unsafe playground equipment or other items should be scheduled for repair, replacement, or removal.
- ~~Post rules for use of Town parks on the Town website.~~ (already done)

5.1 Designated Parks and Green Space (See Exhibit A and B)

Woodward Park — has its origins in the 1897 Maddox plan, which set aside three blocks along the west side of Maple Avenue as a public park named in honor of William Ryland Woodward, one of Washington Grove’s founding trustees and the vice president of the Washington Grove Camp Meeting Association for its first fifteen years. In 1905, the park was informally expanded west to Grove Road. That same year, the area bound by Oak Street on the north, Maple Avenue on the east, the building lots on Pine and Maple avenues on the south, and Grove Road on the west were set apart for recreational purposes and dedicated as Athletic Park. This land was poorly drained and consisted of mainly thicket and bog before it was adapted for recreational use. A plat map dated January 6, 1930, records the lots south, west, and north of Woodward Park (including the area known as Athletic Park) had been officially dedicated as “Park” by the camp meeting association on May 30, 1925. This area, which extended from the private lots along Pine and Maple avenues on the south to Boundary Street on the north and roughly from Grove Road on the west to Maple Avenue on the east, matched the parcels surrounding Woodward Park that were shaded green for “Parks and Parking” in the 1897 Maddox plan. Historically, Woodward Park has provided Grove residents and visitors areas for both passive and active recreation. Between 1905 and 1963, the auditorium stood in Woodward Park north of Oak Street and east of the tennis courts. It was used for Chautauqua as well as other activities. Landscape features associated with the auditorium included a fence and footpaths. Other structures included a men’s clubhouse (no longer extant), a girls’ clubhouse (built in 1910), which was used by the Woman’s Club before being destroyed by fire in 1939, and a large, stone fireplace built by the Athletic Club in 1935. The park’s tennis courts and athletic fields were popular with residents and the public. For a period beginning in 1903 and continuing through at least 1916, track and field events were held in the park every summer.⁵⁹ They attracted athletes from Maryland as well as from neighboring states.⁶⁰ After drainage improvements were carried out along Center Street, a location along the south side of the street was selected as the site for a town maintenance building, which was built in 1955. Following the demolition of the auditorium in 1963, its site was redeveloped as part of a new Woodward Park “recreation center” that featured playground equipment and a multi-purpose, all-weather court. In 1965, a town nursery was established in southeast section of the park. (In 2007, it was redefined as an arboretum.) To commemorate the Grove’s centennial, celebrated in 1974, a group of volunteers built a gazebo (noncontributing structure) in the park on a site northeast of the intersection of Grove Road and Center Street.

Currently bBounded by Grove Road, Maple Avenue, and ~~Boundary Street~~ Center Street, this large park includes the following active recreation areas: 1 ~~soccer-playing~~ field, 2 baseball fields with back stops, 3 tennis courts, 1 basketball court, children's playground equipment, and picnic areas, ~~and garden plots~~. A simple, ~~but very~~ direct, sign has been installed at the entrance to the parking area in Woodward Park which states that a permit is required for use of the field by groups of ten or more people.

Recommendations:

- Support a consistent policy for use and maintenance of the active recreation areas within Woodward Park to ensure their continuing viability for present and future users.
- Examine tennis court fence condition and repair accordingly.
- Enforce permitting process for use of the ~~soccer-playing~~ field. ~~The sign indicating OPEN or CLOSED needs to be removed or clarified as it is misinterpreted to mean that it is O.K. to use the field-- (operational)~~
- ~~Evaluate Woodward Park fireplace for safety and require a permit for a fire.~~ It was suggested the permits for Park and Lake use have a fire permits clause added if it is considered necessary.
- ~~Monitor and upgrade playground equipment, including safety issues, as needed.~~ See section above
- ~~Consider erecting signs which state that trash must be removed by users of the Park.~~ (operational)
- ~~Evaluate continued use of the community garden plots; consider reversion to use as part of the active recreation area.~~ DONE

Formatted: Font: Not Bold

Formatted: Font: Not Bold

Formatted: Font: Not Bold

Wade Park ~~This park is bounded by 4th and 5th Avenues~~, is located north of the Circle between Fourth Avenue on the west and Fifth Avenue on the east. It was named after John W. Wade, a founding layman member of the Washington Grove Camp Meeting Association and its treasurer for fourteen years beginning in 1884. During the camp meeting period, a topographically high point in Wade Park known as Political Hill was a popular gathering place for politicians who attended camp meetings to make speeches and visit with constituents. A flagpole was installed and dedicated in the park in 1921. Around 1939, when Acorn Lane was established, its route passed through Wade Park, roughly bisecting the space. Today, the park features shade and evergreen trees, turf, and hedges. Small-scale features include concrete and wood-slat benches, the flagpole, and signage. Within the park are small parking areas associated with Acorn Lane. They are paved with gravel and feature timber curbs.

Knott Park ~~This park is bounded by Grove and 1st Avenue near McCathran Hall~~, is a small, triangular park bound by Grove Avenue on the west and First Avenue on the east. It may have been named after Ignatius Knott, an active member of the Washington Grove Camp Meeting Association whose wife Mary was also one of the original stockholders. As early as 1878, Knott Park was the location a furniture warehouse operated by Wash B. Williams, a merchant from Washington, D.C. This building (no longer extant) was later repurposed as a Young People's Hall for the Washington Grove camp meeting. In 1902, it was moved out of Knott Park. Today,

Knott Park is planted with shade trees and shrubs, including a notable English yew. Its edges are defined by the gravel roadbeds of First Avenue and Grove Avenue. Undeveloped lots along its north end create the sense that the park is larger than it actually is.

Chapel Park is located along the south side of Center Street between Grove Avenue and Chestnut Road. The 1886 Lang plan set aside a block of land at the western terminus of Park Avenue (later Center Street) as a public park. The 1897 Maddox plan divided this park into two separate spaces: Chapel Park, which was located south of Center Street and measured 171 feet by 150 feet, and Howard Park along the north side of Center Street. Chapel Park was set aside for a chapel, but this use was never realized. For a period before World War II, Chapel Park was used for low impact recreation, including roque, croquet, and badminton. Today, the park features mature oak trees on turf with some understory plantings, including a row of hydrangea shrubs along Grove Avenue. Small-scale features include a concrete and wood-slat bench. A pull-in parking area at the north end of the park along Center Street is paved with gravel.

Formatted: Font: Bold

Howard Park ~~This park is bounded by Chestnut Road, Grove Avenue, McCathran Hall and the Woman's Club,~~ is located along the north side of Center Street between Grove Avenue and Chestnut Road. As noted above, the 1897 Maddox plan divided this park into Chapel Park and Howard Park (also referred to historically as Hotel Park). Howard Park was named after Dr. Flodoardo Howard, a founding trustee and the first president of the association. In 1901, the assembly hall (today McCathran Hall) was erected at the southern end of Howard Park. In 1927, the hotel at the north end was razed because it no longer generated revenue. In 1940 a new assembly building for the Woman's Club was built on the site. Today, Howard Park extends from Center Street on the south to Miller Drive on the north between Chestnut Road and Grove Avenue. It provides a common green for McCathran Hall and the Woman's Club. Footpaths associated with the structures pass through the park, which otherwise features turf lawn, rhododendrons, oakleaf hydrangea, and other shrubs, and deciduous and evergreen trees, including holly, oak, pine, and tricolor beech. Behind the Woman's Club is a stand of cherry trees. The park has an uneven topography that slopes down to the northwest. Small-scale features include four concrete and wood-slat benches and various types of signage.

Zoe Wadsworth Park This park is bounded by Center Street, Grove Road to the intersection of Locust Lane, and Woodward Park. Originally a portion of Woodward Park, it was carved out and dedicated as a separate park named after Zoe Wadsworth for her long-term leading of the Town Elections Board. It contains the Gazebo which was built by volunteers in 1974 to commemorate the Town's Centennial. The gazebo became structurally unsound and was replaced in 1995 by the current Gazebo which has a lower roofline.

~~**Chapel Park** This park is bounded by Chestnut Road, Grove Avenue, and Center Street. (Move to before Howard Park.)~~

McCauley / Washington Grove Lane Park ~~This park is bound on the south by McCauley Street, on the east by Grove Avenue, and on the north by Washington Grove Lane. —also known as Washington Grove Lane Park,~~ is a triangular parcel that provides a verdant entrance to the Grove from Washington Grove Lane. McCauley Street passes through the park, which features

shade trees, as well as smaller, flowering trees, including a magnolia. As the setting of the northern entrance to the Grove, there are several types of signage within the park. Along the western edge of the park is a concrete sidewalk.

Maple Road "McCathran" McCathran Woodland Park This park is located on the east side of Maple Road between house numbers 105 and 115, and was dedicated by former Mayor Donald McCathran and the McCathran family as a neighborhood woodland park. (find additional material)

Jackson Park ~~This park is bounded by Acorn Lane, Chestnut Road, Grove Avenue, and Miller Drive.~~ started out as a small, irregularly shaped park east of Grove Avenue and northwest of the Circle between Third Avenue and Johnson Alley. Based on available records, it is believed the park was named in honor of Richard Plummer Jackson (1816-1891), an early stockholder of Washington Grove. Town records indicate that there was a well and pump in Jackson Park. A local effort by the Washington Conference of Methodists' Ladies Guild to "beautify" the park in 1916 included plans to plant shrubbery and lay walks. Part of Jackson Park was eliminated when Acorn Lane was established (ca. 1939). The space identified today as Jackson Park differs from its historic counterpart. Today, Jackson Park is comprised of what historically has been the north end of Howard Park. It is located west of Grove Avenue and bound by Acorn Lane, Chestnut Road, and Miller Drive. Along the edge of Miller Drive is a small parking area, paved with gravel. Otherwise, the park features a turf lawn planted with evergreen and deciduous trees and shrubs. Small-scale features include a wood bench and a small statue of a seated girl (both located near the intersection of Chestnut Road and Acorn Lane) and signage

Morgan Park ~~This park is bounded by Brown and Railroad Streets between Maple Avenue and Hickory Road.~~ extends between Brown Street on the north, the municipal boundary line on the south, Hickory Road on the west, and Maple Avenue on the east. With the exception of a few parcels between Pine and Maple avenues, which were platted for residential development, the majority of this area was set aside as open space in the 1886 Lang plan. Recognizing the significance of the space as the front door of Washington Grove, it was officially decreed a park in 1890.⁵¹ The park was named after Major Thomas P. Morgan (d. 1896), the second president of the Washington Grove Camp Meeting Association. The forested area provided a natural buffer between the noise and dust of the train depot and the tranquility of the camp meeting grounds. Later, as Washington Grove became a year-round community, Morgan Park also served as a transitional space between the rail corridor and the Grove's residential areas. In the early twentieth century, Morgan Park was the focus of improvements by the Washington Conference of Methodists' Ladies Guild. In the early 1980s, as part of a reforestation effort, the town planted more than three hundred evergreen trees in the park. On July 4, 2008, a plaque (affixed to a boulder) commemorating the history of Washington Grove was dedicated in Morgan Park. Today, roughly one-third of the park is emerging woodland, densely planted with trees and shrubs. A drainage ditch passes through the park from the intersection of Pine Road and Brown Street to a culvert at Railroad Street. A strip of the park along the south side of Brown Street has been cleared of understory vegetation. The section of the park traversed by Grove Road has also been cleared of understory plantings and features shade and evergreen trees on turf, flowering

plants and shrubs (including rhododendrons, azaleas, and hellebores), a concrete and wood-slat bench, the commemorative plaque, and various types of signage.

MacGregor Park (need to research history and add here; check with David Neumann). See notes on resolution for this and Zoe Park.

Formatted: Font: Bold

Railroad Park This park is west of the humpback bridge on the south side of Railroad Street between two commercial properties outside of the Town's boundaries. See Section 7.3 for discussion of this park. is a small parcel of land on the south side of Railroad Street between Washington Grove Lane and Hickory Road. The park is owned by the town and comprised of land that was part of the original tract acquired by the Washington Grove Camp Meeting Association in 1873. The park, dedicated in 2003, commemorates the community's historic ties to the B&O Railroad. It consists of a turf lawn informally planted with small trees and shrubs. Salvaged railroad ties are used as retaining walls. See Section 7.3 for discussion of this park.

The Dog Spot This park near the parking lot in the West woods was established to give residents a fenced dog exercise area. It is an approximately 4000 square-foot oval area which allows dogs belonging to Town residents to engage in off-leash play. The entrance is located on the West Woods trail on the north side of the Maple Lake parking area, a few feet from the trail head. The exercise area is surrounded by a five-foot high chain length fence.

Formatted: Font: Bold

A Dog Park Working Group reviewed multiple possible locations for the exercise area in 2018 and recommended the West Woods location to the Council. In September 2018, the Council approved the establishment of the exercise area, adopted as Resolution No. 2018-09, and developed rules and regulations governing the use of the area, adopted as Resolution No. 2018-06.

Recommendations:

- These parks should be maintained as open space within the Town.
- ~~For Morgan Park, extend the woodlands to the footpath running diagonally from Brown Street to Railroad Street. No longer needed~~
- ~~Survey all parks and define with standard boundary markers. Determine which parks should be defined by boundary markers to protect their integrity.~~
- Park name signs (similar to the one at Zoe Wadsworth Park) should be added to raise awareness of town park locations and public purpose.

Formatted: Font: Not Bold

5.2 The Forest Preserve (East and West Woods)

From its earliest years as a camp meeting ground Washington Grove's landscape has been characterized by a central area of human settlement adjoined on the east and west by two forested areas, known today as the East Woods and the West Woods. Throughout Washington

Formatted: Outline numbered + Level: 2 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0" + Indent at: 0.42"

Formatted: Indent: Left: 0.42"

Grove's history these forests, comprising nearly one-half of the Town's lands, have served purposes both spiritual and secular.

Like many other Methodist camp meeting sites, Washington Grove was originally chosen as a setting for religious revival due in part to the sense of isolation and otherworldliness conferred by its forests. Although considered holy ground, these forests also served very practical purposes as well. The 1886 J.C. Lang "Map and Plan of the Washington Grove," commissioned by the Washington Grove Camp Meeting Association, depicts the present day East Woods as containing a "Laundry Reserve" and "Carriage Park." Timber was harvested here during the early years of the camp meeting. Additionally, it was the location of the camp privies and trenches for burying waste, which were periodically treated with lime. C.J. Maddox's 1897 "Plan of Subdivision with Tabernacle" depicts a proposed subdivision of the East Woods into residential lots. In the very earliest map we have of Washington Grove (the 1873 "Sketch Map" by James L. Ewins) an arrow points westward from the tent sites reading "To Springs." Here, separated from main settlement by what the map labels "Country Road" (present day Washington Grove Lane), were nearly 47 acres that came to be known as the West Woods. As the location of two springs (Whetstone Spring and Maple Spring), this wooded area was a vital source of water. Unlike the East Woods, the West Woods were never platted for building lots. A timber source for the Camp Meeting Association, its logging trails were used by camp meeting attendees for picnics and excursions. Maple Spring, located within the West Woods, became a popular destination.

In Washington Grove, through time, there occurred a gradual shift away from the pure religiosity of the camp meetings to milder forms of spiritual uplift, such as those associated with Chautauqua Assemblies, the first held here in 1902. Nature study and nature appreciation were major features of the movement. As a result, the woods took on new and more secular meanings as evidenced in an excerpt from "The Grove Chautauqua" encouraging participants to "become acquainted with a large number of bird neighbors in their leafy homes and secret haunts." Wildflower study was also recommended.

During the Progressive Era (roughly 1890 to 1920), Washington Grove residents came to view their woods in more managerial and economic terms. Specifically relevant to the history of Washington Grove's forests is the rise of the American conservation movement with its emphasis upon improving the nation's management and exploitation of natural resources. The leading reformer to emerge in this field was Gifford Pinchot (1865-1946), generally credited with introducing sustainable-yield forestry to America. Pinchot's imprint upon the forests of Washington Grove can be traced through the work of one of his protégés, Fred W. Besley (1872-1960), Maryland's first State Forester, who visited the Grove in 1913. Amelia Elmore Huntley (1844-1936), the first woman to serve on the Washington Grove Association's Board of Trustees and a member of the Forestry Committee, was instrumental in bringing him here. Besley's inspection of the Grove's forests was part of a statewide cooperative forest improvement program. Trees that were mature or past maturity, Besley wrote, required an "improvement cutting," which would bring revenue to the owner and improve the condition of young growth. After dividing the Grove into sections, the forester provided recommendations for cutting, reforestation, and other custodial practices. A "plan of operation" was crafted based on Besley's

recommendations, and the Forestry Committee recommended a balance between the need for firewood and the “injudicious [*sic*] felling of trees.” Assistants trained in scientific forestry were tasked with selecting and marking trees for cutting based on species, maturity, and marketability. The Grove generally followed this approach to maintaining its forested landscapes throughout the next half-century. Besley continued to be involved with Washington Grove in the following decades.

For the next half-century forestry management practices in Washington Grove followed an approach similar to the one first introduced in 1913. However, by the 1960s and 70s Washington Grove residents had become forceful advocates for the protection of the town’s natural resources. As early as 1962, residents, including Mayor Don McCathran, suggested formally dedicating the town’s West Woods as a wildlife preserve to protect it from future development. The shift from thinking of the woods as a *reserve* to a *preserve* reflected the conclusion that their value would not be determined from timber sales. The West Woods were officially designated a forest preserve in 1964. Despite this, in 1971, a state forester studied the East and West Woods and determined that mature tulip poplars in the West Woods could sell for \$2,000. The town’s Forestry Committee agreed only to cut dead trees. When it was discovered that live trees had also been marked for cutting, a groundswell of opposition developed. Protests from angry residents at a town council meeting stopped the timber harvest and ultimately led to the resignation of Mayor Al Christie. The incident led to the establishment of a Forestry Policy Committee, which authored studies that led to a forestry policy section included in the town’s Master Plan. The town’s forests were recognized not only for their aesthetic and recreational value, but as protection from noise and a buffer against nearby development.

The Washington Grove Historic District was listed on the National Register of Historic Places (National Register) on April 9, 1980. In it, there was no consideration of the historic significance of the town’s open spaces, including its two forest preserves. To provide a broader context for understanding the District’s significance, an amended nomination has been prepared and submitted, reevaluating the local, state, regional, and national events and trends that have shaped the development, design, and character of Washington Grove. The nomination defines a period of significance of 1873 to 1969 and identifies and describes the architectural resources, landscapes and viewsheds that add to the historic associations, qualities, and values for which the historic district is significant. Among these are the East Woods and the West Woods. Both are officially defined as “Contributing Sites.”

5.23 Maple Lake, Maple Spring, Whetstone Spring

In 1910, the Washington Grove Association (successor to the Washington Grove Camp Meeting Association) initiated a project to create an “artificial lake” by clearing and dredging the area around Maple Spring in the West Woods. Maple Lake as it came to be known, was used for recreation in the summer and to harvest ice in the winter. Since water sports were discouraged by the Methodists, the recreational function of the lake never flourished, and its use as an ice pond was also short lived. As a result, the lake fell into disuse for a number of years until the summer of 1927, when it was revitalized and repaired. Due to a combination of factors, however, the lake basin was not maintained during most of the 1930s and 1940s. In 1953, the town chartered a Lake Committee to guide the restoration of the site. The redesigned lake, inaugurated in 1955,

measured roughly 330 feet long by 160 feet wide with a depth that varied from 30 inches to 8 feet deep. It featured an island and a dock, and a new access road was created to the lake from the trail to Whetstone Spring. Later improvements included a bridge to the island (1962) and a perimeter fence (1973). In the early 1990s, a well and pumping system were installed to feed the lake. It is periodically drained and dredged. Today Maple Lake offers both passive and active recreational opportunities in the form of picnics, birding, fishing, and swimming.

Maple Lake, ~~located in the West Woods,~~ continues to be one of the prime sites for recreational use in the Town. Lifeguards are on duty from 12:00 noon to 6:00 p.m. weekends starting Memorial Day weekend, and then daily from the day in June that public schools close for the summer through the Labor Day weekend. The Town has continued to support 4 weeks of swimming lessons in the month of July. The Lake area is also used year round for walking, birding, fishing and quiet contemplation. A security camera has been installed and is monitored by Town Maintenance.

Recommendations:

- ~~Develop better ways to discourage non-residents from vandalizing the fence, dock, and shed.~~
- ~~Establish a procedure to better protect the town from liability problems by providing increased security at Maple Lake.~~

Move recommendations to Section 6.3

Formatted: Font: Bold

Maple Spring is the primary source for Maple Lake and, along with Whetstone Spring (also located within the West Woods), are headwaters to Great Seneca Creek. It comes up south of and historically was a feeder to Maple Lake (see description below). During the camp meeting era, the spring was an important source of potable water and a popular destination for nature walks, picnics, and other passive recreational activities. Historic photographs indicate that early improvements at the site of the spring included the construction of a tiered, masonry spring box.¹ Maple Spring continues to run in the late winter and early spring; however, it no longer feeds Maple Lake. (As a result of adjacent development, a well and pumping system were installed to feed the lake in the early 1990s.²) An archaeological survey may identify remnants of historic features associated with the spring, and this site should be considered archaeologically sensitive.

Whetstone Spring is located in the north end of the West Woods. While it was an important source of water for Washington Grove, its location deep in the woods and far from the center of the campground made it an inconvenient source for daily use. Instead, Whetstone Spring mainly provided a cool, shady spot for outdoor gatherings. In the late 1930s, Washington Grove hired a local mason to build a stone fireplace (no longer extant) at Whetstone Spring.³ It was located along the bank opposite the spring. Additional improvements were made in 1949 when the

ground around the spring was cleared and benches were installed. The dugout area of the spring was once capped with a slab of granite. According to oral tradition, the stone was removed in the 1950s, although the reason why is unknown. ⁴ Today, Whetstone Springs' waters are visible during the late winter and early spring from along one of the trails that passes through the woods. The site is also considered archaeologically sensitive, as remnants of the fireplace or other features may remain.

5.4 Washington Grove Conservation Park (see also more detailed history of why and how the “fee” to this land was purchased by the Town in Section 2.2 Municipal Growth Area 1)

The original tract of land acquired by the Washington Grove Camp Meeting Association included a 50-acre farm on the east side of Ridge Road. This farm was sold in 1890 and became the property of Maryland landowner Eugene B. Casey. For decades, the Casey farm and other agricultural resources on the fringes of the Grove, defined the rural character of the community and reinforced the idea of the Grove as a “place apart.” Today, the 12-acre Washington Grove Meadow Conservation Park which is located on part of the land that once comprised the Casey farm, is a key component of the setting of Washington Grove. The park helps contextualize the Grove within Montgomery County’s agricultural heritage, which influenced the region’s settlement and land use patterns well into the twentieth century. The park also provides a critical buffer between the Washington Grove’s residential streets and surrounding high-density residential and highway development and preserves the rural, open vistas and spatial organization of the agricultural fields that historically formed the setting of the Grove. The park is located along the eastern edge of Ridge Road and features a native meadow habitat with forested edges and natural surface trails. Built structures are limited to park signage and an informational kiosk. While the town owns the land, the park is wholly maintained and operated by the Maryland-National Capital Park and Planning Commission (M-NCPPC).

Recommendations

5.5 Historical Concerns: The elements identified in the National Register as contributing to the historic integrity of the Historic District include:

1. All the above named parks
2. Maple Lake
3. Washington Grove Conservation Park

The historic character of these features should be given consideration in planning and treatment.

6. ENVIRONMENTAL CONCERNS And SENSITIVE AREAS

In accordance with State law, this Plan recognizes the need for goals, objective, principles, policies, and standards designed to protect, from the adverse effects of development, sensitive areas, including streams and their buffers, 100-year floodplains, habitats of threatened and endangered species, and steep slopes.

The abundant and clean water supplies within the 200 acres of the Town were a major attraction for the original purchasers of the Town. Over the years, open and piped drainage systems were installed in the residential and wooded sections of Town.

Recommendation:

- ~~The Town culverts and drainage systems should continue to be maintained on a yearly basis and replaced when necessary as roads are repaved. This benefits the quality of the headwaters of three major streams that feed the Potomac River: Rock Creek, Muddy Branch, and Great Seneca Creek. Move this to Section 7 Water Resource Elements~~

6.1 Forest Conservation

~~The Town's Forest Preserves (see Exhibit A) serve five main purposes. They significantly affect air quality and temperatures; they provide habitat for plants and wildlife in an area of diminishing natural habitat; they help to prevent erosion and degradation of the quality of the headwaters of three significant waterways; they provide places for passive recreation such as walking and birding; and they act as natural buffers from encroaching development. To ensure that the goals of forest conservation also apply to privately owned properties within the Grove, the Town has enacted a forest conservation ordinance that governs subdivisions, grading, and activities requiring a sediment control permit for tracts of land over a specified size. This Master Plan recognizes that the Town's Planning Commission must administer the forest conservation ordinance as part of its development review activities.~~

~~(1) **East and West Woods** The Forest Preserves of Washington Grove total almost one half of the Town's lands and are located on the northeast and northwest sides of Town. They provide significant environmental and aesthetic benefits to the Town, as well as to the external neighborhoods in the area. Water running through the East Woods is part of the Rock Creek headwaters. Water running through the West Woods is part of the Great Seneca Creek headwaters. The Town has an adopted Forestry Policy that is aimed at protecting the East and West Woods and ensuring that their benefits will be available for the foreseeable future.~~

~~Since adoption of the 1975 Master Plan, additional housing has been constructed along a portion of both the east and west woods borders (see map). The East Woods now are encircled by housing. The result of the new housing, some with lawns extending to the woods and occupants who look out on and develop concern for the woods, has been to reduce points of entrance to the~~

~~woods and some of the associated impacts such as trash dumping, motorized vehicles and vandalism.~~

~~Along the West Woods borders, there is new singlefamily housing within Town boundaries along Daylily Lane and two older singlefamily homes with access along Washington Grove Lane, now annexed into the Town; previously constructed multifamily and more recent singlefamily housing beyond the Town boundaries. The only green space adjoining the West Woods that remains is the floodplain associated with Whetstone Run and City of Gaithersburg playfields. Erosion, encroachment by neighbors bordering all woods, invasive plants, and trash dumping continue to have a noticeable negative impact on all woods.~~

~~The impact on the Woods and its flora and fauna, as surrounding green spaces have disappeared, cannot be assessed because firm baseline data are not available for preceding years. While the East Woods also suffer from rampant invasive plants and the changes associated with wetweather streams and a deteriorated drainage system dating back to Association days, they continue to enjoy the most regular use by Town residents for dog walking, nature hikes, and exercise.~~

~~Walkways within the Town's forest preserves offer a variety of settings and require different levels of maintenance, as opposed to walkways within developed areas. For instance, portions of walkways within the East Woods are currently unusable for days (or even weeks) after inclement weather, but mitigation of several drainage problems could allow easier access into some areas. Within both the East Woods and the West Woods, revising the layouts of some of the walkways and enhancing them by seating areas, by re-plantings that concentrate native plants into lowmaintenance natural gardens, and by naming and mapping the walkways will improve their functions for pedestrians.~~

~~Regular removal of trash helps to eliminate the notion that woods should function as dumps. The East Woods currently enjoy a fairly low level of trash impact. The West Woods, however, are the repository of large amounts of dumping, much of which originates from outside Town borders. Using Town maintenance staff time on a regular basis to combat refuse from others is not feasible.~~

~~Whether from erosion, run off, invasions of destructive plants, or the assault of motorized vehicles or tree cutters, both woods are sensitive areas and vulnerable to degradation. Maintaining as much environmental diversity as possible to support flora and fauna should be a major goal of the Town. This includes a hospitable environment for those species that appear in Town woods on a seasonal schedule as well as for those that pass through the woods as part of their regular territory.~~

~~Recommendations:~~

- ~~● Implement plans to revise layout of the woods' paths to remain reasonably accessible throughout the year, and to maintain a variety of habitats for birds and vegetation. Leave existing nature trails/walkways wide enough for access by the Town tractor.~~

~~Some trimming along designated trails may encourage additional pedestrian use, and also increase sunlight to maintain a variety of habitats for birds and vegetation.~~

- ~~● Schedule regular trash removal from the woods. Utilize community resources and request enforcement assistance from the County offices to help control trash and storm water impacts on the woods.~~
- ~~● Any actions related to the future of Washington Grove Lane must mitigate existing and potential runoff and erosion in the West Woods.~~
- ~~● Increase plantings on the west side of the Lake for screening, to prevent erosion, and to clearly mark the Town boundary.~~
- ~~● Annually, clear rampant growth around Whetstone Spring to enhance its use for passive recreation while safeguarding its natural qualities.~~
- ~~● Implement the adopted 5-year plan to remove invasive plants from each woods.~~
- ~~● Compile a 3-year inventory of existing plants, animals, soils, and water of both woods. Seek professional assistance from local, state, and federal experts in coordination with Town Volunteers.~~
- ~~● Following inventory of woods flora and fauna, assess the longterm impact of erosion and invasive plants. Consider whether drainage patterns through each woods should be altered.~~
- ~~● Restore names of walkways in the forest preserves, as shown on early maps.~~

The Forest Preserves of Washington Grove cover 82 acres—almost one half of the Town’s lands. There are two stands—commonly called the East Woods and the West Woods and located respectively on the Northeast and Northwest sides of Town. The Town’s Forest Preserves (see Exhibit A) are what remain of the forested context of the original Camp Meetings. The woods are an important part of Washington Grove’s historic context, a defining feature of the town’s character and an essential part of its identity as a *Town within a Forest*.

Benefits of the town’s forest preserves include:

- Improved air quality and cooler temperatures
- Natural habitat for native plants and a variety of wildlife
- Prevention of soil erosion
- A natural buffer from surrounding development
- A place for reflection, exploration and passive recreation such as walking, bird watching and wildflower observation through a network of trails
- Water quality protection—water running through the East Woods is part of the Rock Creek headwaters; water running through the West Woods is part of the Great Seneca Creek headwaters.

Washington Grove has an established Forestry Policy since the 1970’s designed to protect the East and West Woods so that their benefits will be available for future generations and in 2015, the Town commissioned the Forest Stewardship Plan 2015 by Parkton Woodland Services to report on the current condition of the woods from registered forester, Bill Bond. That report, referred to here as the Bond Report, is now the cornerstone of the Town’s forest stewardship planning.

The East Woods

The East Woods is a 38.6-acre oak-dominated forest with white oak being the predominant tree in the over-story. This is an old growth stand with canopy trees estimated to be 120+/- years old. It has no history of any disturbance such as logging or fire.

US Fish and Wildlife Service's National Registry wetland maps identify about 12 acres of non-tidal wetlands in the center of the East Woods. It is typical of Piedmont region wetlands, forming low swales or depressions; flooding seasonally or temporarily; and underlain by poorly drained soil. The trees growing in the wetland area differ from the rest of the stand and include swamp chestnut oak and pin oak plus an abundance of native Greenbrier.

The West Woods

The 44.5-acre West Woods is dominated by yellow poplars which are the predominant over-story tree. The Bond Report noted that the trees are of exceptional size and quality and that the West Woods has far better drainage than the East Woods. The West Woods has a history of timber being harvested between 1920-1950 including the harvest of American chestnut trees dying from the blight. No timber has been harvested since the 1970's and the rapidly growing yellow poplar, which is the first tree to emerge, will eventually be replaced by a hardwood forest in the natural process of field succession. The under-story is dominated by native spicebush and non-native invasive plants—the most common of which are Japanese barberry, wisteria vine and Japanese privet. The West Woods includes two active natural springs, Maple Spring, which feeds Maple Lake, and Whetstone Spring.

Ecosystem Health of the Woods Preserves

Both the East Woods and the West Woods are under pressure from the presence of more deer than the forests can sustain. Of specific concern is the loss—due to deer over-browsing—of both native species at the herb/ground level, under- and mid-story level as well as the suppression of seedlings, saplings and young native canopy trees required for maintenance of a full canopy. The consequent absence of a multi-storied forest and lack of native plant variety significantly reduces or eliminates specific wildlife habitats.

The situation in the East Woods is grave. Years of over-browsing by deer have wiped out most native plants, shrubs and small trees in the herb/ground cover, under- and mid-story. Ongoing failure of mature trees has led to an increasing loss of canopy. That canopy loss, combined with the absence of a succession of native trees (also a result of over-browsing by deer) has created ideal conditions for the incursion of non-native invasive (NNI) plant species. In fact, at the time of the 2015 Bond Report, almost 50% of the East Woods had dense concentrations of non-native invasive species—the most common of which are Japanese stilt grass, wisteria vine, mile-a-minute and Japanese honeysuckle. These invasive plants are not palatable to deer and they are dominant where native species (preferred by deer) once thrived. The NNI plant removal work in the East Woods shows significant progress and will continue. That said, mature trees continue to fail and openings in the canopy continue to grow, creating additional opportunities for non-native invasive plants to spread in the East Woods.

According to the Bond Report, stocking levels are not constant throughout the East Woods. There

are many areas of low stock—the result of blow downs or age-related death of small groups of mature trees. In many of these low-stock areas, there is little or no canopy and no succession of native canopy trees. The report goes on to note that advanced regeneration in the East Woods is limited to only a few areas where there is a) full canopy, b) the under-story is open and c) the soil remains friable. These are the East Woods areas which, if protected from deer over-browsing, are prime candidates for restoring themselves.

The West Woods is healthier than the East Woods according to the Bond Report. The drainage is better; there are fewer holes in the West Woods canopy; those holes are smaller; and the canopy trees in the West Woods are younger and healthier than in the East. That said, there are increasing signs of deer damage and incursions of NNI plants including Japanese barberry, wisteria vine and Japanese privet.

Invasive plants are concentrated in a few areas along the perimeters of the West Woods and are likely be kept under control with recently adopted monitoring and remediation practices. In the summer 2018, a new NNI plant, wavy leaf basket grass, which has been spreading in the mid-Atlantic region, was spotted in the West Woods. The incursion was more extensive than initially thought but the Town, working with its invasive plant control contractor and town volunteers, responded quickly to address it.

However, without a concerted and continuing effort to control the deer over-browsing, the lack of succession of native canopy trees will lead to the same conditions in the West Woods that are currently laying waste to the East Woods. These conditions include loss of canopy as trees age and fail, absence of succession of native canopy trees to fill gaps in the canopy, and a subsequent increase in NNI plants wherever the sun hits the forest floor.

The main ecological driver in the current at-risk state of the town forest preserve is the large (and growing) population of resident and transient whitetail deer. The deer over-browsing is responsible for the dramatic reduction of native plants, shrubs and trees; the loss of the forest “layers”, and the suppression of a succession of native canopy trees.

The over-population of deer is a problem that’s not unique to the Town. It exists throughout the Mid-Atlantic region. Montgomery County Parks and some private land owners have been controlling deer by managed hunts and report significant reductions in damage from over-browsing and a natural restoration of the forest ecology.

Other forest and land owners have used deer exclosures to control over-browsing. Once deer were fenced out, native trees and understory vegetation began to re-emerge. The non-exclosed sites saw continued reduction in diversity and the increasing presence of NNI plants. Some institutions, such as Brookside Gardens, use a combination of deer exclosure and deer harvesting.

The Woods Committee’s Vision Statement paints the picture of a restored forest as a diverse, successional, and self-sustaining ecosystem of multi-story native trees, shrubs, and plants.

This will require both immediate action and a long-term commitment by the Town. The Woods Committee has developed an integrated multi-pronged strategic framework based on the Bond Report to achieve the goal of forest ecosystem protection and restoration. This framework includes deer population control, non-native invasive plant control, and replanting native trees and vegetation to support reforestation. The Woods Committee will specify how success will be measured.

Community education and engagement

The issues related to saving the woods will require community education and engagement. This will include ongoing educational outreach to town residents, meaningful volunteer activities, and opportunities for residents to participate in decision-making about forest preservation.

RECOMMENDATIONS

- Establish a new Forest Preserve zone in the East and West Woods through the zoning amendment process
- Continue to follow our multi-pronged Forest Stewardship Plan (2015) which includes:
 - The deer control plan to reduce over-browsing in both East and West woods.
 - NNI plant species removal and control to include both mechanical and chemical methods as necessary. Scheduled herbicide application will be conducted by a professional certified contractor. Annual assessments will be conducted.
 - Replanting native trees and understory vegetation
- Continue community outreach and education on forest ecosystem health.
- Additional support of forest ecosystem health restoration to include mitigating trash and vandalism in the Forest Preserve, remediate storm water runoff and erosion of West Woods; restore Maple Spring to include fencing for protection; restore Whetstone Springs; maintain walking trails, and explore need for expansion of Town maintenance staff and/or contractors in order to support increased reforestation efforts.

6.2 Residential Forest

(12) Town Trees and Arboretum— Within the residential portion of town, huge old trees are a complement to the forest preserves. In addition to natural trials such as drought, they have others to contend with, among the most lethal of which are lack of nutrients as they age, air pollution and base wounds. In the past ten years over browsing and rubbing by local white tail deer have also become a very serious problem. In the town parks and residential areas we now plant only trees greater than 2" caliper, usually 2.5-3.5" caliper and they must be protected from deer rubbing for at least 5 years thereafter. Only trees with 5-10" caliper, which must be brought in by tree spade, are large enough to withstand both browsing and rubbing on their own. This option is expensive but quite effective. It has also enabled us to increase residential area tree age diversity. Shrubs, when planted, need 5-6 foot square enclosures to protect them for extended periods until they are large enough to withstand deer browsing. There are many native species it is no longer realistic to plant at all. And the methods used in the residential part of town are unrealistic in the two town forests where deer browsing has removed the understory portion of the canopy and

eliminated natural forest succession. The lack of understory has also eliminated habitat for insects, birds and small mammals. If nothing is done our woods will not be forests much longer.

Measures have been implemented to improve tree health. Town Maintenance now has a (ground injector) which can be used to administer mycorrhizal fungi or other nutritional supplements to a tree. This is done in conjunction with the new water wagon program. The water wagons are used to water all new trees we plant for one to two years in the case of nursery grown trees, and two to three years for larger tree-spade installed trees. Another program to improve tree health is the rolling pruning now occurring throughout the town. Inspection and pruning are done by a Maryland licensed tree expert/contractor. Serious arrears have been addressed in the past (five) years and now annual pruning covers the entire residential area every two to three years. Separate line items are now included in the Town budget for tree pruning, tree removals, and buying new trees. Although we watch for gypsy moth infestation we also rely on the Maryland Department of Agriculture gypsy moth program to alert us when the amount of gypsy moth infestation is cause for concern. A small placeholder sum for gypsy moth treatment is now included in the town budget. This can be adjusted as need arises.

A Town Nursery, ~~now the Town Arboretum~~, was established within the Woodward Park boundaries over 30 years ago. Many plantings in the Grove began as small slips and seedlings from the nursery, transplanted over the years by volunteers and Town maintenance staff. ~~There now is considerable older plant stock, however, so big that transplanting cannot be easily accomplished by volunteers with shovels. Many of the trees and shrubs are of high quality and would be real assets, if transplanted successfully in other public areas around Town. The largest plants in the nursery are taking space that could better be used to begin new, young plants for future plantings and replacements. Material which was suitable for transplantation has now been relocated. The remaining trees are now a more natural looking area in Woodward Park-which is no longer suitable for a nursery. As long as the deer population in Washington Grove remains high only larger trees can be planted with any chance of for survival.~~

The 2005 Tree Inventory proved problematic as tree tags fell off, were removed, or were subsumed by tree growth and the Inventory usefulness declined. The new pruning program substitutes regular inspection and pruning by an outside licensed tree service to preserve public safety. We are looking into the use of GPS mapping to keep track of newly planted trees. As older trees are removed our planting of new trees has accelerated. In the past six years we have added 60 upper canopy trees (such as Red Oak), 11 intermediate canopy trees (such as American holly), and 14 understory trees (such as Serviceberry).

Problems with increasing amounts of non-native invasive plant species has been recognized for some time. A new Plant Replacement Policy has been adopted to facilitate the removal of invasive plants in our parks and residential areas. See also Section 6.2.

Comment [GC2]:

Comment [GC3]: Should we add a summary of the new Plant Replacement Policy

Recommendations:

Underline : Indicates matter added to previous Master Plan.

Page 66

DRAFT Dated 2017-12-18

~~Strikethrough~~ : Indicates matter deleted from previous Master Plan.

- ~~Maintain the a~~ Tree Inventory through regular updates, especially for trees that are removed or for new plantings. . Explore the use of GPS coordinates to facilitate electronic record keeping.
- ~~Develop a program for tree health and, when necessary, replacement. A periodic inspection for Gypsy Moth infestation should be part of the program. The program should be the basis to schedule regular feeding of the trees in the Town parks and along the walkways, as well as for the annual safety trimming and tree removal. Maintain a program for tree health and, when necessary, replacement. Inspection for insect threats, including Gypsy moth and Ambrosia beetle, should be part of the program. Continue to include~~ necessary supplies and staff time in the Town's annual budgets.
- Review and update the goals of the 2006 Urban Forest Management Plan; the educational component of the Plan should be implemented.
- ~~Evaluate plant stock in the Town Arboretum for transplanting or replacement. Seek funds from green and open space programs to successfully relocate trees and shrubs from the nursery to other public areas in Town.~~
- ~~Control growth of vines, bramble, and other invasive plants around Town trees. (See new section 6.2)~~
- ~~Evaluate and address the~~ Given the disastrous impacts of the deer population on our urban canopy; seek outside resources to assess and minimize the impacts of the deer population on gardens, plants, and trees and even reverse these impacts in our town parks and walkways, our forests, and our residents yards and gardens.

(2) Control of Non-Native Invasive Plants

Washington Grove is justly proud of its woods, leafy parks, and tree-lined streets and avenues. However, these verdant places are increasingly threatened by non-native invasive (NNI) plants.

NNI plants are introduced species that can thrive in areas beyond their natural range of dispersal. Within their own range, plant species belong in a particular ecosystem where they have evolved in balance with other plant, animal and insect species. That balance is maintained by the totality of that ecosystem, as the plants provide food for particular predators. When they find themselves away from their normal range, the absence of predators and competitors gives certain species a key competitive advantage over the native flora. Additionally, these plants are characteristically adaptable, aggressive, and have a high reproductive capacity. Given their natural advantages, NNI plants crowd out and choke native species, depriving them of light and nutrients and upsetting the balance of the native flora. Compared to other threats to biodiversity, invasive introduced species rank second only to habitat destruction.

An example of a large NNI that is prevalent throughout Washington Grove is Amur or Bush Honeysuckle (*Lonicera maackii*), which thrives in our yards, along our streets and avenues, and in our parks and woods. Ecological concerns with Bush Honeysuckle are numerous.

Recommendations

- The town should identify non-native invasive species (NNI) found on town property.
- The town should prioritize removal of these NNI plants and, as it becomes possible, replace them with more appropriate plants. Replacement should focus on plants native to the Mid-Atlantic.
- Residents should be educated as to the threats of NNI plants, their identification, and options for removal/replacement on their properties.

6.23 Additional Sensitive Areas

(1) **Maple Lake** (See Exhibit B) -- Maple Lake is one of the great environmental and recreational treasures of Washington Grove and its source, Maple Spring, is part of the headwaters system of Great Seneca Creek. Originally constructed in 1910/1911 for swimming, boating, and ice harvesting, the Lake later was neglected and gradually filled in with silt, plants and decayed organic material. In the 1950's it was revived by cleaning out and deepening the basin, building the earth berm on the east side and improving the drainage and outflow systems. In 1974 and again in 2000, the Lake was drained and dredged by a bulldozer to remove the silt, mud and organic decayed material. The sludge was heaped and left at the southeast side of the lake, where it became covered with overgrowth.

A deep drainage ditch was constructed outside the entrance to the Lake. This ditch carries runoff and storm water from the woods and Washington Grove Lane around the area of the Lake. A wooden concrete culvert is used to span bridge spans the ditch allowing access to the Lake and has survived the recent passage of a large drilling rig.

In the late 1980's significant water flow was lost from Maple Spring (the Lake's source) due to construction outside of Town west of the Lake. With support from the City of Gaithersburg, the Town was reimbursed by the builder for the construction of a deep well and pumping system which is now adding cool, clear water to the lake on a timed basis each day during the summer months.

Monitoring and Management: The primary goal is to prevent eutrophication, the process by which excessive nutrient enrichment (including increased nitrogen and phosphorus) due to decomposition of organic materials, including algae and submerged rooted pond weeds, depletes oxygen levels in the water. Lakes then gradually fill in with new plant growth and silt and become swamps or small streams. This process is what happened to Maple Lake after 1912. In recent years, algae and submerged rooted pond weeds have been controlled fairly well with algaecides and herbicides, but the decomposition of algae and weeds as they fall to the bottom increases the nutrients in the water, causing further growth.

The Town must continue to maintain the delicate ecological balancing act that allows the use of the Lake for safe swimming, and keeps it safe and hospitable for water creatures including fish, turtles, muskrats, frogs and birds both on site and as headwaters for Great Seneca Creek. This balance can best be accomplished by continued water quality testing and by continued use of safe herbicides and algaecides while we consider and investigate long-term plans. The fecal coliform count has been well below the standard acceptable level.

Formatted: Font: Bold, Underline, Font color: Custom Color(RGB(0,102,0))

Formatted: Font: Bold, Underline, Font color: Custom Color(RGB(0,102,0))

~~With the availability of the well water at Maple Lake, an opportunity exists for constructing toilet facilities (Exhibit B, item 1). This possibility should be explored with WSSC to determine if the existing sewer line at Maple Lake is still active. A connection permit and some form of metering system would be required. The bathroom itself should be a simple block structure, vandal proof to the extent possible. It should be located away from the open area, so as not to become a prominent landmark of the Lake.~~

Recommendations:

- Continue water testing and appropriate use of safe herbicides and algacides to protect and maintain this headwater of Great Seneca Creek.
- ~~Compile a data base of~~ Monitor water quality parameters and plant, animal and fish characteristics to monitor for signs of degradation of the Lake's ecology; seek advice and assistance from environmental experts, in addition to Town volunteers.
- Increase planting of native trees and shrubs on the west side of the Lake for visual screening and to prevent erosion. The Forestry and Beautification Committee should be consulted for ideas and recommendations.
- In conjunction with the Town block surveys, ~~clearly mark~~ maintain the Town boundary on the west side of the Lake beyond the fenceline; use plantings to help define the property line.
- Inspect the bridge over the drainage ditch to determine its weight capacity and remaining life; ~~install handrails along the span of the bridge.~~
- Eliminate erosion of the Lake fence post anchors by some means, such as reinstalling the fence farther into the Lake compound area and away from the drainage ditch or, in conjunction with the ditch inspection, analyze the cost of piping the ditch along the limits of the Lake fence. Alternately, consider stabilizing the ditch with rip-rap or gabions to curtail further erosion.
- Investigate the possibilities of installing seasonal port-a-potty(s) ~~toilet facilities at a location near the old pumping station for use only during hours of Lake operations.~~

Prevention of Future Eutrophication: To increase depth and remove the rooted pond weeds and accumulated organic debris, the Town should plan for periodic dredging of the accumulated silt, mud and organic debris from the Lake bottom as was done in 1974, 1998, and 2002. The problem of disposal of the sludge also must be looked into with attention to legislation since the earlier dredging work to determine if any restrictions now apply to the process of dredging or disposal of sludge from the Lake. In 1998, an aeration system was installed at the Lake to decrease turbidity and improve oxygen flow throughout the water.

Recommendations:

- Establish a schedule to dredge Maple Lake to prevent future eutrophication. Maintain the aeration system and monitor its effectiveness for increasing dissolved oxygen levels in the Lake.
- Following any dredging project that may be undertaken, ~~extend~~ maintain the sand beach from its present location as far as practical to the island bridge.

Maple Spring and Whetstone Spring: Maple Spring is the primary source for Maple Lake and, along with Whetstone Spring (also located within the West Woods), are headwaters to Great Seneca Creek. In order to enable Town residents to enjoy the springs that were so much a part of the leisure activities of the original residents, the spring box at Maple Spring should be refurbished and an elevated boardwalk ~~provided should be explored~~ (see Exhibit B, item H). Because the environment is sensitive, access to this new nature area should be limited. Therefore, the fenced perimeter around Maple Lake should be enlarged to incorporate this area.

Recommendations:

- Refurbish the spring box at Maple Spring. ~~Erect~~ **Explore** a raised boardwalk nature trail up to and around the spring. Erect a fence so that Maple Spring is included within the present Maple Lake compound. Install rustic log benches at the Spring. Maintain the rest of the area as open space and natural habitat.
- Annually clear silt and undesirable growth around Whetstone Spring to enhance its use for passive recreation while safeguarding its natural qualities.
- **Implement means to minimize the run-off from Washington Grove Lane and Lake parking lot into the Maple Spring area.**
- **Check with the Montgomery Parks Department for vandal-resistant seasonal (contractor supported) toilets.**

Formatted: Font: Bold

Formatted: Font: Bold

(2) **Brown Street Corridor** -- The Brown Street Park corridor extends from Maple Avenue westward to the intersection of Railroad Street and Hickory Road. A gate at this intersection restricts vehicular access to Brown Street between Hickory and Chestnut Roads. A major portion of this corridor, Morgan Park, extends from Maple Avenue westward to Grove Road and borders Railroad Street. Water flowing through this area is one headwater of the Muddy Branch tributary to the Potomac River. Approximately two-thirds of Morgan Park is an emerging woodland. The remainder is semi-wooded and includes two memorial gardens. A drainage ditch traverses the park near Pine Road to a culvert at Railroad Street.

The Brown Street park corridor is a major buffer zone between the Town and the traffic along Railroad Street and along the railroad tracks. The completion of possible extensions to Metro, in addition to the steady growth in railroad and vehicular traffic, will increase noise and air pollution in the Town. The emerging woodlands has potential to ameliorate these, as would berms along Railroad Street. If the wooded area is extended, the standing committee for Forestry should review security control experiences of other park systems to determine if strips or baffles should be mowed within the wooded area.

Recommendations:

- Extend existing woodlands in Morgan Park to the present footpath running diagonally from Brown Street to Railroad Street. Consider increasing wooded growth as a shield along the remainder of the Brown Street Park corridor.
- Maintain the ditch in Morgan Park to ensure drainage of both residential and wood areas and to safeguard the quality of water draining into Muddy Branch. Consider the use of Town equipment contrasted to contracted excavation. County officials should

consider correcting drainage flow problems under Railroad Street to support the Town's efforts.

(3) Ridge Road Corridor -- The Ridge Road corridor extends north and east from the intersection with Brown Street to the easternmost end of Ridge Road. Residential lots cover the west side of Ridge Road, while the east side is as yet undeveloped, except for four homes within the Town. Waters from this area drain to Rock Creek. In 2002, 13 acres of the former Casey Field on the east side of Ridge Road were designated for protection as Legacy Open Space.

The Town's highest priority for the Legacy Open Space portion of Casey Field is that it be preserved as public open space; any development approved for the former Casey Field, must protect the historic character of Washington Grove and the Town's forests, recreational and park facilities, and must be compatible with Washington Grove.

A strip of land on the south side of the easternmost portion of Ridge Road is owned by the Town, and east of that a 15-foot wide wooded buffer and an intermittently wooded drainage bed are proposed to buffer the new housing development.

Recommendations:

- **Protect the a portion of the former Casey Field on the east side of Ridge Road via permanent inclusion in the Legacy Open Space program under County control, or via Town control, to help maintain water quality of headwaters for Rock Creek and for passive recreation needs as the greater Shady Grove area becomes fully developed.**
- **Negotiate with Montgomery County, the Maryland-National Capital Park and Planning Commission, and the developers of Piedmont Crossing to establish a significant diverse wooded buffer zone along the southern side of the easternmost portion of Ridge Road rightofway to help mitigate the sight and noise impacts. Utilities for all new development should be underground and planned for as the buffer zone is planted.**
- **Collaborate with developers of the Piedmont Crossing community to explore finding and relocating box turtles impacted by the development.**
- **Protect the easternmost portion of Ridge Road and the Town-owned strip of land on the south side of that portion by delineating and maintaining that strip as a wooded barrier and buffer.**

~~**(4) The Emmons Property**—In 1994, the Town purchased the Emmons property, about 1/3 acre along the east side of the fourhundred block of Grove Road, for the purpose of establishing a continuous line of Town-owned open space from the ball field to the Town's northern border and to control and direct the future use of the land, in keeping with the 1975 Master Plan (see map). Only one small parcel along Grove Road still remains privately owned. Town ownership of the Emmons property now precludes private development, a potential prospect that Grove residents wanted to prevent, and allows its incorporation into the planning and management of the Woodward Park / East Woods tract.~~

~~The parcel has remained fallow for decades and as a result of being unused and not maintained by its owners, has become overgrown with volunteer trees and shrubs consisting predominately~~

~~of tulip poplar and locust trees and wild rose bushes. No trees of significant stature grow on the property except for a large oak at the eastern edge. Additionally, the rear of the property near the woods walkway is very wet each spring and after long wet periods. Remnants of a previous garden are evident, predominantly in the spring when many bulb flowers are in bloom. The flowers, however, are losing their ability to thrive because of the uncontrolled undergrowth and the heavy shade.~~

~~Some Town residents remember when the property was a meadow attracting and providing habitat for a variety of song birds, and have suggested that the property should be returned to a similar state. Many Town residents would like to see this area along Grove Road managed as a different environment, not allowed to continue growing haphazardly.~~

~~Certainly this and other areas of Washington Grove could be maintained for particular purposes. A more controlled and planned management of this and adjoining tracts along Grove Road would provide opportunity to create a different habitat and support more diversification of species. Any project directed at reclaiming and managing the area, however, would be a major effort. It would require a commitment of Town resources either through volunteer help and/or paid for services.~~

Recommendations:

- ~~Assess and evaluate the area generally east of Grove Road to the fire lane, and from the wooded area north of the Gazebo extending to the fire lane opposite Dorsey Street. Assessment and documentation should include:~~
 1. ~~description of the boundaries to be studied;~~
 2. ~~documentation of the current flora and fauna;~~
 3. ~~description of other characteristics and the appearance of the land, noting any significant features and problems and changes that might be occurring; and~~
 4. ~~evaluation of potential problems, trends, and opportunities for changes and improvements.~~
- ~~Develop a plan for Town consideration to convert a portion or all of the study area to a managed area that would result in a greater diversification of plant and animal life.~~
- ~~Continue to seek ways to secure for public use the last piece of privately-owned property north of the Gazebo on the east side of Grove Road.~~

The Emmons Property is now part of the East Woods and will be dealt with as such

7. WATER RESOURCES ELEMENT

The Town of Washington Grove is within the area serviced by the Washington Suburban Sanitary Commission (WSSC). The WSSC was established in 1918, but the concept of a bicounty water/sewer agency was first suggested in 1912 following a strong complaint from the neighboring District of Columbia about the streams within the Nation's Capital being fouled by waste from Montgomery and Prince George's Counties. Over the years, small existing community systems, some run by municipalities like Hyattsville and others privately operated by land companies such as those in Chevy Chase and Edgemoor, were acquired and eventually integrated into the WSSC regional system. Among the early acquisitions were the water systems of Takoma Park (1919), Mount Rainier and Kensington (1922), and Glen Echo (1926). Washington Grove, served in its earliest times by a collection of springs and wells (and honey wagons), approved joining the WSSC system at an annual meeting in 1923, thus initiating a major construction effort that resulted in the first hookups in 1927.

7.1 Water Supply System

With regard to water supply, the Patuxent Plant was the WSSC's principal supply facility during the last half of the 1940s and in the 1950s when rapid post-World War II suburban growth was taking place. During the 1950s, the WSSC pursued the study, design, and construction of what is today its principal water supply facility, the Potomac River Filtration Plant in western Montgomery County. When the first 30 MGD (million gallons per day) stage of the Potomac Plant was opened in 1961, the WSSC was in a position to operate a dual source system, drawing on both the Potomac and Patuxent Rivers. The Potomac Plant was expanded progressively during the 1960s and now has a nominal capacity of 250 MGD with the ability to produce at a rate of 285 MGD for short operational periods.

Further expanding its resources, the WSSC completed construction of the Little Seneca Creek Dam and Reservoir in northwestern Montgomery County in 1985. The Reservoir, containing 4.25 billion gallons of water, is available to supplement flows in the Potomac River during dry periods and serves as a recreational resource along with the other two WSSC reservoirs. The WSSC also has access to water stored in the 30-billion-gallon Jennings Randolph reservoir, located further upstream on the Potomac in Bloomington, Maryland, and operated by the U.S. Army Corps of Engineers. These resources ensure adequate water supply for the Town of Washington Grove for the foreseeable future, including the maximum potential of 54 additional homes from re-development within the current municipal boundaries. (Capacity confirmed via communication from Roland Steiner, WSSC, 24 October 2008.)

However, many homes located along the easternmost portion of Ridge Road still rely upon wells for their water supply. With the proposed development of the former Casey Field, there are concerns regarding impacts on the water table that supports these wells. As part of the development process, plans and funding contingencies have been proposed for the possible extension of the WSSC water lines to serve these homes along Ridge Road within the Town.

There is also significant concern for the condition of the aging water delivery systems within the

Town. The frequency of water line assessments and rehabilitation work has increased, as well as the impacts of such work on public roads, walkways, and parking areas. As noted in the July 2007 WSSC Utility-Wide Master Plan, the renewal of buried assets is WSSC's most immediate challenge, with approximately 85% of the buried water distribution system piping reaching or exceeding its useful life by the year 2020. Considerable Town diligence will continue to be required to ensure that WSSC contractors and crews restore the disturbed areas in an acceptable manner.

Recommendations:

- **Monitor contingency plans, water assessments, and funding commitments to support extension of WSSC water lines to serve all of Ridge Road.**
- **Coordinate with WSSC representatives to plan ahead, when possible, for water line rehabilitation work; ensure follow up tracking of restoration work needed for both public and private areas disturbed by WSSC pipeline repairs and rehabilitation.**

7.2 Wastewater System

While the water supply system was being developed, progress was also being made on the regional integration of the wastewater system. The first sewer constructed by the WSSC was installed in 1919 in Riverdale, Prince George's County. The early backbone of the Commission's wastewater system was formed by the acquisition of municipal networks in Hyattsville, Takoma Park, Kensington, Mount Rainier, Chevy Chase and Edgemoor. Direct connections, under agreements with the District of Columbia, were made with the Washington system for the Little Falls, Rock Creek, and some other tributary trunk facilities in the 1930s and 1940s as the WSSC was able to complete connecting lines. Shortly after the end of World War II, negotiations began with the District of Columbia for the joint, Maryland-D.C. development of the Blue Plains Water Pollution Control Plant, which was designated as the regional facility for both Washington, D.C. and the Maryland suburbs. Today, all major trunk sewers in Montgomery County, with the exception of the Great Seneca Sewer Basin, are connected to the regional Blue Plains System, which have a present-day capacity of 370 MGD, of which just under 170 MGD has, by agreement, been allocated to the WSSC.

It was not until the late 1950s and the 1960s that the WSSC began to develop some major new permanent sewage treatment facilities of its own. In the 1970s, the WSSC developed the 5 MGD interim Seneca Treatment Plant in Montgomery County and two lesser facilities with capacities under 1 MGD, the Horsepen Wastewater Treatment Plant near Bowie (no longer in service) and the Damascus Plant in Upper Montgomery County. The Seneca Wastewater Treatment Plant was expanded to 20 MGD in 2003 and is currently being expanded to 26 MGD. In recent years, all plants receiving sewage from the WSSC's wastewater collection system have been equipped with some form of advanced treatment. The WSSC service area is generally ahead of the rest of the nation in the development of facilities which have taken a big step (tertiary treatment) beyond the conventional primary-secondary processing of wastewater. Consequently, it produces an exceptionally high quality of effluent (treated wastewater) at all of its plants.

The advanced capabilities of these WSSC facilities, and the associated programmed expansions as documented in the WSSC Utility-Wide Master Plan, will ensure adequate sewerage treatment capacity for the Town of Washington Grove for the foreseeable future, including the maximum potential of 54 additional homes from re-development within the current municipal boundaries. (Capacity confirmed via communication from Roland Steiner, WSSC, 24 October 2008.) With regard to the possibility of annexing parcels for low intensity industrial/research uses, any water supply and local wastewater collection system capacity issues would be identified and addressed during the preliminary planning process and under WSSC's Development Services Process.

With the connection of the last home on McCauley Street to a WSSC sewer in 2007, the only homes in Washington Grove still using septic systems for waste disposal are among the properties along Ridge Road that were annexed into Town in 2000. The Town's Building Permit Regulations require that every plan for the erection of a new building must show suitable provisions for connection to the WSSC wastewater system.

7.3 Stormwater Management and Pollution Reduction

In its years of operation, the WSSC has taken on other responsibilities as well, such as the promulgation and enforcement of plumbing regulations (licensing and inspection) in suburban Maryland, and the development and maintenance of storm drainage facilities within its boundaries. In the late 1960s, Montgomery County assumed responsibility from WSSC for storm drain facilities within its boundaries. But Washington Grove was established as a planned community, where the practical art of stormwater management was best tested in the presence of the water itself. Early experience as a campground led to placing tents and cottages (and ultimately home sites) on the higher elevations within Washington Grove, with ongoing community investment in stormwater management. Today, the Town has a network of almost a mile of installed and maintained storm drain pipes and channels, more than half being grass swales and open ditches that allow for absorption. These drainage pipes and channels convey the Town's stormwater runoff to the Town's East Woods and West Woods, historically located and preserved to absorb the stormwater.

The topography of Washington Grove provides a structure for analysis of the pollution associated with stormwater runoff. The Town is located at a high point between watersheds with all drainage from Town leading ultimately to the Potomac River via three distinct paths. Within Town, each of these paths includes Town-owned properties that absorb and initially filter the runoff.

1. Morgan Park/Oakmont Park/Muddy Branch – A number of years ago, the Town undertook an aggressive multi-species planting effort within the parkland between Brown Street and Railroad Street to jumpstart re-growth of woodlands in this former mowed portion of Morgan Park. Besides establishing a visual and noise buffer, the re-growth has successfully increased absorption of runoff from Brown Street and adjacent private properties. However, once the stormwater runoff leaves Morgan Park, there are significant hindrances to stormwater flow that need attention, all within County jurisdiction. First is the drainpipe under County-maintained Railroad Street—this needs to be replaced and lowered about 6 inches. Next is the

larger drainpipe under the railroad tracks—where accumulated gravel and silt have filled about half of the pipe’s diameter. Next, stormwater flow through the drainpipe under Oakmont Avenue and into County-owned Oakmont Park is hindered by the excessive accumulation of wood chips. These wood chips, dumped in the last decade in Oakmont Park by trucks of the Asplundh Corporation, have inhibited water flow and killed trees and other vegetation that should be helping to absorb and filter the runoff. Some cleanup of these drainpipes has been done over the years by Town volunteers, but much more work is needed by the County to restore flow capacity and filtering of this stormwater that drains into Muddy Branch.

2. East Woods/Mill Creek/Rock Creek – Some of the most historic stormwater drainpipes convey runoff from The Circle into the East Woods, where almost all runoff is absorbed within this property of more than 40 acres. Originally laid out with walkways and waterlines, the East Woods is preserved and enjoyed as a Forest Preserve of mature trees, with renewed efforts to enhance the trails with pedestrian bridges over the wandering swales and wetter areas. There is also a renewed focus on controlling invasive species within the East Woods to help ensure that trees and other vegetation continues to thrive. While excessive runoff from the East Woods would conceptually flow towards Rock Creek, little runoff leaves the East Woods and thus there is effectively no pollution contribution from this path.

3. West Woods/Whetstone Run/Great Seneca Creek -- The greatest stormwater challenges come not from within Town, but from properties outside the Town boundaries that have been allowed by the County to dump their stormwater into the West Woods. The tremendous outflows of stormwater (and trash) from Towne Crest and the surrounding County jurisdiction have plagued the West Woods with significant erosion, tree damage, and trash accumulation. The Town and the County have renewed their collaboration to improve management of this intrusive flow from adjacent properties and to conduct remedial restoration for natural streambeds suffering from the erosion. The County’s contractor installed a 2-level catchment basin to lessen the velocity of the runoff and catch trash in basins accessible from the Towne Crest parking area for trash removal. Boy Scouts, Town volunteers, and young residents of Towne Crest tackled erosion areas and trash removal within the West Woods. While some of the stormwater leaving the Town via Whetstone Run originates from springs within the West Woods, the greatest threat to Whetstone Run is from sediment and trash-related pollution associated with this Towne Crest influx. Increased community awareness will assist, as will continued collaboration with County experts, and more frequent volunteer efforts to remove accumulated trash.

In 2006, the Federal Emergency Management Agency (FEMA) completed a Flood Insurance Study of Montgomery County, Maryland, and incorporated areas. This study revises and supersedes previous Flood Insurance Study reports and/or Flood Insurance Rate Maps for these areas including Washington Grove. This study developed flood risk data to be used to establish actuarial flood insurance rates. The information is also to be used by local governments to update floodplain regulations and to promote sound land use and floodplain development. This study concluded that Washington Grove is among the incorporated areas of Montgomery County that are non-floodprone.

Recommendations:

- Continue seasonal removal of leaves and debris from drainage swales.
- Conduct periodic inspections of swales and critical drainage points, with additional inspections particularly prior to predicted heavy rainfall.
- Convert paved swales to grassy swales, where practical and with due consideration of possible impacts on basements of adjacent homes, to promote natural filtering.
- Work with County to increase stormwater flow capacity under Railroad Street and the railroad tracks to improve drainage for Morgan Park.
- Monitor effectiveness of recently installed stormwater catch basin intended to slow the heavy flow of stormwater and waterborne debris entering the Town's West Woods from the neighboring apartment development under County jurisdiction.
- Schedule periodic trash collections in West Woods to remove debris along borders and from improved stormwater catch basin on the Town's northern boundary; coordinate efforts to include volunteers from Town and the apartment development.
- Continue to consult with experts in streambed restoration to develop and implement restoration in the West Woods necessitated by years of excessive stormwater flows resulting from Countyapproved development; evaluate lessons learned by other jurisdictions; implement and enhance streamflow controls using downed wood and other heavy natural materials.

8. COMMERCIAL CORNER

The Town of Washington Grove is essentially residential in nature. In its early days, the Town was separated from adjoining communities by open space. At that time, there was some need to have easy access to food and supplies, and a small general store filled these needs. In addition, the Town's postal needs have been provided over the years by a local post office rather than home mail deliveries. Through much of its history, the Town has had a single local commercial zone of approximately 40,000 square feet at the southwest corner of the Town known as the commercial corner.

The Town's residents continue to need and want a local post office which functions as one of the focal points for the community. The postal facility now housed in the commercial zone well serves that need. For many years, Town residents have had access to an ever-increasing number of commercial centers outside the Town where they can fill their commercial needs. Businesses at the commercial corner, therefore, have become less critical for meeting the needs of Town residents. This change in importance of the commercial corner to Town residents calls for new thinking on the relationship of the corner to the Town.

In the past decade, the Town has attempted to address, through ordinance revisions and discussions with the property's owners, the commercial needs of Town residents regarding the types of businesses housed at the corner, and improvements to the physical environment of the commercial corner. Although progress has been made, the corner continues to require significant attention of the Town Council and Planning Commission in monitoring and intervening to improve the relationship between the commercially zoned property and the Town's primarily residential character.

As a major gateway to Washington Grove, the commercial corner and businesses adjacent to the corner across Railroad Street and Washington Grove Lane do not positively project the vision of a predominantly residential "Town Within A Forest" of quiet, sylvan beauty and charm. Any effort to improve the commercial corner will ideally include the entire gateway, including the adjacent business areas. While the Town's ability to influence or control commercial development outside its borders is limited, the Town can have significant influence and control within its borders.

8.1 Long-term Vision for Commercial Corner

The Town should move in the coming years to develop and implement a plan for improvements at the commercial corner that will be more compatible with the sylvan beauty and quiet residential nature of the Town. The overarching goals should be to create an environment inside and around the commercial corner that will result in increased green space, more pedestrian-friendly walkways, automotive-friendly roads, and building façades that better reflect the residential nature of the Town.

The commercial corner exists in an area that has potential impacts from ongoing outside stresses, such as plans by the Montgomery County Department of Transportation for the future of the Humpback Bridge, potential developments in areas adjacent to the Town, possible changes in Washington Grove Lane, and the potential impact of the Inter-County Connector on surrounding roads. Areas that must be monitored include changes in roads or road patterns in the area, zoning issues in Gaithersburg that may impact the commercial corner, annexation issues in properties adjacent to the Town and Gaithersburg, and the development of strategies to address issues proposed by Montgomery County that could potentially impact both municipalities. The Town must be vigilant in staying involved in these issues to monitor their impact on future plans for the commercial corner.

Recommendations:

- **Develop a future plan for the commercial corner that includes the property within Town limits, the roads and businesses adjacent to the corner, and development and construction plans in the area that may impact the corner, such as the future of the Humpback Bridge.**
- **Focus on development of beneficial relationships with the owner of the commercial corner, as well as proprietors of businesses housed therein.**
- **Institute a more formal relationship, at the level of Town Council, with the City of Gaithersburg, and work with the City to develop and monitor plans for compatible land uses for properties in the vicinity of the commercial corner.**
- **Work with the Montgomery County Department of Transportation and the City of Gaithersburg to redesign the intersection of Railroad Street and Washington Grove Lane in concert with proposed changes to the commercial corner.**

8.2 Zoning Issues

The Zoning Ordinance appropriately provides that the purpose of the local commercial zone is to protect both nearby residences and local retail enterprises. The Zoning Ordinance presently sets out an appropriate mix of permitted and special exception uses that meet this goal. The ordinance should continue to prohibit food preparation uses; these uses produce unacceptable byproducts such as trash, odors, and traffic that make food preparation uses incompatible with nearby residential uses.

The Zoning Ordinance continues to evolve regarding issues related to the commercial corner. While this has been effective to a point, it has not resulted in entirely satisfactory solutions for maintaining a positive relationship between the commercial corner and the Town. It is incumbent that in the next decade the Town revise the ordinances to improve this relationship, with the goal of revisions to benefit both the Town and the owners and proprietors at the corner. The Town should be consistent and vigorous in enforcing applicable Town ordinances to the commercial corner. If the Town will not enforce an ordinance, the ordinance should be reviewed and repeal considered.

A creative approach to help address improvements at the commercial corner is to create a special Tax District for commercial properties, designed to provide a source of funds that in conjunction

with general tax revenues could be used to provide for the establishment of more green space with emphasis on well-maintained gardens, much needed façade improvements to the commercial structures, traffic, and safety improvements. These improvements will reduce the adverse impacts of the commercial corner on adjacent residential.

Recommendations:

- **Regularly review the commercially zoned property for compliance with Town ordinances and tenant agreements, in coordination with the Town attorney.**
- **Involve the code compliance official in issues regarding compliance with Town ordinances at the commercial corner including attention to issues along Hickory Road.**
- **Work with the owner of the commercial corner to ensure compliance with existing ordinances and/or agreements.**
- **Evaluate the extent to which impervious area at the commercial corner could be converted to green space and what sort of façade enhancements would reduce the negative visual impacts of the present commercial structures on adjacent residential uses.**
- **Create a special Tax District for commercial properties to fund, in conjunction with general tax funds, improvements that will reduce the impervious area of the corner, create and maintain more green space improved with appropriate plantings creating a more park/residential setting, improve and maintain the façade of the commercial structures, and improve traffic/pedestrian safety in and around the corner.**

8.3 Beautification and Safety Issues

An inviting commercial area attracts desirable tenants as well as customers and beautification of the commercial corner requires cooperation of the owner and tenants. The Town supports and encourages those permitted uses which motivate the landlord to make improvements to the property, including creation of a special Tax District to encourage visual enhancements.

Beautification of the commercial corner should begin with a focus on the area within Town limits, but should include discussions with adjacent businesses that are not within the Town limits. With the creation and ongoing maintenance of Railroad Park, the Town has begun the process of improving areas adjacent to the commercial corner. An effort should be made to assist businesses adjacent to Railroad Park in making visual improvements along Railroad Street and Washington Grove Lane.

The focus of changes at the commercial corner to improve the visual and safety profile of the corner should begin with the following:

1. The area behind the commercial corner, along Hickory Road, should be altered to eliminate or reduce the existing impervious parking spaces and replaced with green space (for example, raised soil beds for plantings). Improvement of the façade of the commercial structure, especially along Hickory Road and the north side, is important to protect the residential character of the west side of Town.

2. The front parking area of the commercial corner should be modified by the reduction in parking spaces, added green space, and de-emphasizing the current dumpster site.

3. In the area around the commercial corner, improving safety of pedestrians and automotive traffic will depend on improvements to the traffic patterns at the adjacent stop light. Construction of a traffic circle to replace the stop light or use of a 3-way stop should be investigated. This will alleviate the current safety issues regarding left turns out of the entrance to the commercial corner onto Washington Grove Lane, as well as the dangerous right and left turns out of the entrance onto Railroad Street.

4. The façade of the four buildings should be unified visually and designed more compatibly with near-by residences.

5. Signs throughout the center should have a continuity of design. Maximum safety should be a major pedestrian and traffic sign consideration. Placement of signs regarding pedestrian and automotive traffic should be studied within the scope of larger issues regarding changes to roads abutting the commercial corner.

Recommendations:

- **Work with the owner of the commercial corner to address sight and distance problems that now affect both pedestrian and vehicular traffic along Hickory Road. Work to solve parking alignment issues in the area on Hickory Road and in the front parking area of the commercial corner.**
- **Study if elimination of food preparation business at the commercial corner could allow a smaller dumpster site or its elimination.**
- **Enforce existing ordinances and review them for potential changes within a special Tax District for beautification strategies to be applied to the commercial corner.**
- **Maintain Railroad Park and encourage adjacent business owners to participate in visually enhancing the corner. Establish landscape treatment along Washington Grove Lane to establish a visual/psychological sense that one is entering a community that cares about itself.**
- **Maintain regular contact with the City of Gaithersburg and the Montgomery County Department of Transportation to provide visual enhancements in the area surrounding the commercial corner.**
- **Include the front area of the commercial corner in the Town's regular maintenance schedule, seeking assistance from the County for assistance in the area of the bus stop.**

9. DEVELOPMENT AND PRESERVATION STRATEGIES

The Town maintains both its economic and historic vitality because its structures and setting retain and amplify the overall sense of place that placed it on the National and State Registers of Historic Places. Its commonwealth and way of life depend on retaining the character-defining elements of its structures and setting while encouraging appropriate augmentation to its built environment.

9.1 Infill Development and Re-development

Although most of the Town's privately-owned parcels are already developed, the analysis provided in Section 2.1 demonstrates the capacity for further internal growth is significant. Section 2.1 deals with the adequacy of the infrastructure in the face of two types of possible internal growth. The challenges to preservation from both potential infill development and redevelopment are highlighted.

The first type of development essentially retains the current placement of existing homes and subdivides lots only on that basis. This infill development can potentially increase the number of residential houses by 36 units. This would represent additional growth of more than 15%. The second type of potential development for growth is substantially greater using a re-development scenario. When taking into account the possibility for demolition of existing homes and then resubdividing the lots to maximize the number of allowed units, the number of homes could increase by up to 54 units. This would represent growth of 25% above the current size. Either of these two scenarios would significantly impact the Town's character.

The threat of this occurring may not be immediate or imminent, but many older neighborhoods in the County today are struggling to retain their original character in the face of the pressure of increasing land values and the resulting spread of mansionization. Washington Grove is not immune. It faces the same pressures driven by the vanishing space available for new development. The attractiveness of infill and re-development will only increase as development in the surrounding sectors that is already planned or approved becomes reality. This indicates a need to re-examine Town ordinances and to explore a wide range of alternatives to assure further infill and re-development is compatible with the historic character of the Town.

The Town has chosen what some might characterize "a live and let live" attitude when it comes to placing limits on the kinds of buildings that are erected within its borders. The Zoning Ordinance regulates lot area and width, building coverage, set backs and height only. There are manifold and complex reasons for this. Many are compelling and are historically rooted in longstanding traditions, such as reliance on the strong sense of volunteerism within the community, and have served the Town well. Any action taken to promote or enhance preservation must balance public and private needs. Any action must reflect the individualistic attitude of Town residents and recognize the need to accommodate older structures to contemporary standards and modern amenities.

9.2 Historic Character

This quality that strongly binds the Town together is best described in the document that nominated it for inclusion on the National Register:

“Washington Grove is an incomparable town – unique in its roots, in its initial land use plan, in the design of its dwellings, in its determination to retain more land in a natural state as forests and parks than developed property, and in the character of its history.”

In November 2001, the Town established a Historic Preservation Commission (HPC) with the task of helping to safeguard the heritage of the Town by encouraging the preservation of the historic nature of the Town and the elements of its cultural, social, economic and architectural history. The HPC reviews and comments on plans and proposals, and all such reviews are advisory only. The HPC also serves as an official archival body of the Town and a resource and clearinghouse for information regarding historic preservation.

The elements identified below combine to produce what is viewed as critical to the preservation of the Town's character.

9.3 Overall Layout and Walkways

The Town's original land plan - encompassing all but the newer portions of the Town - was built upon two spatial forms: 1) the Circle with seven radiating avenues designated as walkways, and 2) a regular grid of alternating roadways and walkways. This common network of maintained but un-paved walkways provides a unique physical organizing element for the community and, as most of the original houses are oriented to face the walkways with a welcoming porch, a social organizing one as well. There are no sidewalks along the vehicular roadways running behind the houses, reinforcing the communal space created by the walkways in front.

As this represents a unique quality that binds the community, it is important to retain and enhance it wherever possible as a character-defining element. While the grid system has not been put in place in the newer annexed areas of Town, it could be pursued in any additional subdivision.

9.4 Structures and Special Venues

The structures described in Community Facilities (Section 4) constitute the principal components and locations of the Town's common activities that define the sense of place. Each has its unique contributions supporting the setting, legacy and common functional aspects of community character.

In addition to the physical structures are the following venues that enhance interaction with the natural environment:

- Tree Nursery/Arboretum
- Woodward Park, Morgan Park, McGregor Park, Chapel Park, Wade Park, Wadsworth

- Park, Howard Park, Knott Park
- Dedicated benches and the Gazebo
- Maple Spring and Maple Lake
- East and West Woods
- The Circle

Recommended actions for sustaining and enhancing these venues are contained in this and other sections of the Master Plan.

9.5 Scale and Character of Homes

The National Register of Historic Places Nomination Form outlines elements of the original houses contributing to the unique sense of place which justified the Town's inclusion on the Register. The most important of these elements are the modest scale and compatible character of the houses and their easy integration with the natural landscape.

The first of these, modest scale, is the perceived size of a house or addition in relation to its surroundings, both natural and constructed. Along with actual small size, modest scale can be reinforced by multifaceted roof arrangements, use of porches, separate garages, and other design elements breaking up the mass of the house.

The second, compatibility of character, is the recognition of those common aspects of Grove houses that both contribute to their shared identity and that distinguishes them from other communities. Though dominated by the Early Methodist Cottage Style, it is described more broadly in the Nomination Form as one of “adaptive re-use coupled with eclectic spirit”.

The last, integration with the natural environment, is achieved by preserving native trees and plants and accommodating the built environment to them rather than the other way around. This has given rise to the motto “a Town within the forest”.

These elements are critical to any effort to retain and enhance the historic character of the Town.

9.6 Neighborhoods

The Town is composed, as well, of neighborhoods that share common characteristics that in many cases distinguish them from other neighborhoods. These common characteristics can be age, scale, house character, density, shared public elements, or combinations thereof. This eclectic composition is a contributing aspect to the sense of place.

Delineation of neighborhoods is not always clear or easily defined and can be characterized in different ways. The area along Washington Grove Lane and Chestnut Road has a general character distinct from the Circle and its environs, which is different again from the neighborhood bounded by Cherry and Maple Avenues. Many neighborhoods in the Grove have their own charm and intrinsic value and can be appreciated for their distinguishable attributes, yet each has at least some diversity of design.

9.7 Financial Incentives

Most homes in Washington Grove are located within the registered historic district, and there are financial incentives available to those homeowners. The following outline demonstrates the tax credits that may assist with rehabilitation and restoration.

A. Maryland Historic Rehabilitation Tax Credits

- Provide Maryland income tax credits equal to 20% of the qualified capital costs expended in the rehabilitation of a “certified heritage structure”
- Are available for owner-occupied residential property as well as income producing property
- The rehabilitation expenditure in a 24-month period must be substantial, exceeding \$5,000 for owner-occupied residential property, and the greater of the adjusted basis of the structure or \$5,000 for all other property

B. Federal Historic Rehabilitation Tax Credits

- Provide federal income tax credits equal to 20% of the qualified capital costs expended in the rehabilitation of eligible properties
- Is only available for income producing properties
- The rehabilitation expenditure in a 24-month period must be substantial, exceeding the greater of the adjusted basis of the structure or \$5,000
- Must be performed in accordance with the *Secretary of the Interior’s Standards for Rehabilitation*

9.8 Connections with Neighbors and Viewsheds

Washington Grove has longstanding historic connections to its neighboring landscape and the associated vistas. Maintaining connections that are mutually beneficial has been a consistent objective of the Town. Oldest amongst these is the tie to the railroad and the string of railroad communities spawned by it. This connected Washington Grove to the City of Washington through daily commuter trips, provided a common focus with the Oakmont neighborhood, and instigated the commercial activity at the corner of Washington Grove Lane and Railroad Street. Oakmont developed a more suburban character of housing, but the layout focused on the Train Station, the original General Store and Post Office (now Hershey’s Restaurant), and the Washington Grove Elementary School. The Oakmont viewscape from Town includes a Commercial-Transition zoned parcel, developed and undeveloped residential parcels, Hershey’s Restaurant, Oakmont Park, and the Oakmont School, which viewed across the railroad, is of a compatible scale and density.

The Commercial Corner sprang up near one of the few crossing points of the railroad, the Humpback Bridge, and became a transfer point for agricultural goods from wagons to the railroad. The Corner provides an important connection and transition area between the

residential Town and the commercial East Diamond entrance into Gaithersburg. Gaithersburg historically functioned as the “downtown” destination for purchase of goods and materials for the Washington Grove summer residents. The elements of the agricultural character are retained in the southwest vista with the former silos and feedstore, and the current tractor store. The Amity community presently shares only the frontage onto our forest preserve areas and walking connections, but there are strong historical connections deriving from the parallel development of the African American Emory Grove Community. While the Town’s vistas to the more intensively built areas to the northwest and northeast are mostly buffered by the forest preserves, the proximity of the adjacent neighborhoods and the walking connections invite interactions and use of the recreational amenities. The Town is committed to keeping its park facilities available for enjoyment by its neighbors.

The farmland and woods to the southeast of the Town have always afforded the residents a chance to experience the founders’ desire to “sojourn” within a rural agrarian environment as an escape from the urban environment of the city. This property is undergoing approval for residential development, but 10 acres of the ‘upper field’ may be preserved. The proposed dense neighborhood of single-family houses and townhouses is designed to face the houses along Ridge Road across a parallel road and a buffering hedgerow. It is hoped that much of the character of a country road will survive the development. The Town’s vista to the southeast is imperiled by the planned InterCounty Connector with its multi-level traffic loops and associated lighting of the roadway, vehicles, signs, and toll facilities.

The last connection is an inappropriate one represented by the industrial yard of Roberts Oxygen, the adjacent multi-use open storage clutter, and the industrially zoned Oakmont strip. This development replaced the original landscape of farms and houses, has no positive connection, and provides a viewshed that is detrimental to the character of the Town.

Recommendations:

- **In all planning efforts, consideration should be given to sustaining the historic character of the Town as an important attribute and a key aspect of its economic vitality.**
- **Any effort to promote or enhance preservation must do so through a balance between preservation efforts and respect for private property and accommodation of private needs.**
- **Individuality of design contributes to the eclectic composition of the Town and should be encouraged.**
- **To counter the trend towards mansionization, a re-examination the Town’s ordinances is underway, including a proposal to realign building coverage standards to help assure that further infill, redevelopment, subdivisions, and re-subdivisions are compatible with the character of the Town.**
- **Historic preservation efforts should feature educational initiatives that expand public awareness and build on the Town’s rich history and the appreciation of that history by residents.**
- **The Historic Preservation Commission should expand its role to collect and disseminate relevant historic information, to promote the appropriate storage, display, and**

availability of archival material, and to conduct workshops on financial and other incentives associated with historic preservation.

- The Historic Preservation Commission should enhance the effectiveness of its advisory role by promoting to residents the value of its design review early in the proposal process.
- The expanse of The Circle, the historic center of the community, should be reinforced by restoring the open character of the public areas and removing encroaching undergrowth and plant material on the publicly-owned segments of The Circle consistent with an emphasis on the hardwood canopy over an open, mowed environment.

10. INTERJURISDICTIONAL ISSUES

The Montgomery County Planning Board developed the 1977 Shady Grove Sector Plan and the 1985 Gaithersburg Vicinity Master Plan which were adopted by the County. These planning documents delineated the County's earlier general design for the area surrounding Washington Grove. The area in the Shady Grove vicinity is serviced by: the extensive County Service Park located at Crabbs Branch and Shady Grove Road; the terminus of the Red Line of Metrorail abutting the Service Park; and the Central Processing Facility, which allows a rail transfer of trash, at Shady Grove Road and Route 355.

In 2006 the Board radically shifted their vision for the area and adopted a new Sector Plan that instead focused concentrated mixed-use development on the land adjacent to the Metro Station as part of the State and County priority for Smart Growth Development. In reaction to previous creation of a surplus of employment growth, the Board decided to facilitate development of housing to re-balance the jobs/housing ratio and reduce future traffic increases generated by job growth. In order to accomplish this, the Board has re-zoned much of the property surrounding the Station to accept up to 6,500 of attached single-family and mid and high-rise multifamily residences, over 1 million square feet of commercial space, additional parking and a library and recreational space. This amount of growth requires that a new elementary school be located either as part of the immediate development or on the alternate site on the "lower field" portion of the 65-acre former Casey property adjacent to the Town. Also in order to accomplish this, all or part of the above-mentioned County Service Park must be relocated. Among the sites identified for this are the Casey properties flanking I-370 along the future extension of Crabbs Branch Way planned to connect with Amity Drive through the planned development southeast of Town.

Since 2001, this property adjacent to the full length of Ridge Road and Brown Street extended has been in the active planning stages for residential development. Zoned R-90 for quarter-acre lots in the 1977 Sector Plan, a complex phased Preliminary Plan utilizing the cluster option was approved in 2005. The first of three phases allows for 65 single family detached and attached dwellings including 12 mandated Moderately Priced Dwelling Units to be concentrated along Amity Drive and adjacent to lower Ridge Road, the transfer of 11.3 acres of the field along upper Ridge Road to the County as passive open parkland, and a small active neighborhood park adjacent to the stream. The second phase allows either an additional 89 detached and attached dwellings or a reservation for the elementary school required in the Sector Plan. The third phase allows for an additional 43 attached and detached single-family dwellings on the InterCounty Connector (ICC) ramp reservation adjacent to the ICC right-of-way property. These two phases require the completion of the connection between Amity Drive and Crabbs Branch Way through the adjacent Casey property. The Town has been actively working with the County, the Board, and developers to minimize the impact and maximize the compatibility of this development. These, and development of the King property along Route 355, exert enormous pressures on day-to-day living in the Grove.

A large and varied employment area continues to expand from the Metro station at Shady Grove to Route 28/Shady Grove West. Workers from all parts of the County and beyond commute in and out of this area. There are growing and unmet needs for transportation, recreation, and such basic job amenities as sidewalks from bus stops. Traffic noise from the highways that encircle the communities in this area is now almost as intrusive at night as during the day. In 2006, the Final Environmental Impact Statement and the Record of Decision were approved for the ICC. A design/build contract has been awarded for the westernmost portion of the ICC, and construction has begun. The adopted concept plan included connecting the ICC/I-370/Metro Access Road with a complex three-level cloverleaf interchange located in the southeastern portion of the “lower field”, and the elevation of the top-level roadway at the level of the existing hedgerow separating the upper and lower fields. Besides the expected loss of this hedgerow, virtually all of the existing forest separating the lower field from the Crabbs Branch Shopping Center will be eliminated. Lights, signs and toll gantries are planned to rise above the roadway. No noise barriers are planned for the portions of the new roadway or existing I-370 facing the Grove. Substantial efforts have been and continue to be made to pressure the State Highway Administration (SHA) to recognize and mitigate the negative visual and auditory impact that will result. Further efforts are being made to induce the County to address the same issues for the county-regulated properties between the ICC and the Town. Location of the SHA ICC road maintenance complex on one of the Casey properties adjacent to Robert’s Oxygen is also a common concern.

The cities of Gaithersburg and Rockville provide much needed stability and a number of amenities for the area-at-large. Their recreation program and facilities are carefully controlled but available for use by many workers and residents in the greater Shady Grove area. The cities have an exemplary approach to landscaping and maintaining their roadways, many of which feed into the County employment area. Beyond city boundaries, the County has required local recreation facilities as part of the development process.

The needs in this part of the County, however, outstrip local amenities. Review of the heavy impact traffic and roads have had on this area must be a prime restraint whenever the County considers more employment opportunities or new development. The demands for major recreational areas for adults as well as children should be resolved.

Between the ever-increasing development pressures this area of the County has been experiencing, the proposed “urban village” for 15,000 people at Shady Grove Metro, and the effects of the ICC, the neighborhood is on the verge of radical transformation, losing the last vestiges of its rural character and becoming an attraction for a housing market with values revolving more around transportation opportunities than the peaceful contemplation of nature. This will inevitably affect the future of the Grove in ways that will require ever more efforts to protect its unique community values. Cooperation among neighborhoods, municipalities, and county decision makers is an important ingredient to the successful resolution of these large issues that span such jurisdictions. A Town liaison should be identified for such purposes. Examples of such cooperative efforts are the Town's active participation in the Maryland Municipal League and such intergovernmental groups as the Gaithersburg-Washington Grove

Fire Board. The Town should remain open to participation on other mutually beneficial organizations as appropriate.

Recommendations:

- **Ensure a Council-level responsibility for liaison with Gaithersburg, Rockville, and County agencies.**
- **Promote cooperation with County agencies by holding “open houses” and other events/forums to host visits by County representatives.**
- **Continue to invite the District 39 State Senator and Delegates for periodic updates on legislative issues.**
- **Encourage participation by the Mayor, Council, and other Town officials in Maryland Municipal League meetings and events.**
